Any deficiency statement ending with an asterisk (\*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

Level of Harm - Minimal harm or potential for actual harm  Residents Affected - Some	b. During a review of Resident 18's Admission Records indicated the resident was initially admitted on [DATE] and readmitted on [DATE]. The Admission Records indicated Resident 18's diagnoses included unstable angina (condition which the heart does not get enough blood flow and causes unexpected chest pain), chronic obstructive pulmonary disease (group of diseases that block airflow and make it difficult to breathe), and cardiomegaly (condition in which the heart is enlarged).				
		linimum Data Set (MDS), a resident as: t 18 had no cognitive (thought) impairn			
	During a review of the Resident Co regarding her call lights not being a	ouncil minutes dated 3/9/2021 indicated in a timely manner.	Resident 18 voiced grieved		
	During an interview on 05/06/21 at 09:02 a.m. Resident 18 stated I have access to my call light. When I use the call light, sometimes the nurses come in and tell me they will come back because they are helping someone else. This problem happens on all shifts. I usually need my diaper change because I'm incontinent. Sometimes I wait about 30 minutes because the nurses forget to comeback.				
	During a concurrent interview and observation on 05/06/21 at 10:05 a.m., Resident 18 pressed her call light. During the observation a green light above Resident 18's room turned on. However, there was no audible alarm sound to alert the staff. During the observation seven staff members were observed passing Resident 18's room without responding to the call light. During the same observation at 10:15 a.m. the call light was answered by a Restorative Nurse Assistant (RNA). The RNA stated Everyone is responsible for answering the call light. There's a light that goes off at the nurse's station and a beeping noise. If someone passes a resident's room and the green light is on then they are supposed to answer the call light. We answer the light and we try to assist them but if we are busy with other residents we are supposed to ask for assistance. We should not tell the resident to wait. We should take care of them right away.				
	c. During a review of Resident 2's Admission Records indicated the resident was initially admitted on [DATE] and readmitted on [DATE]. The Admission Records indicated Resident 2's diagnoses included hemiplegia (paralysis of one side of the body) and hemiparesis (muscle weakness or partial paralysis of one side of the body), muscle weakness, type 2 diabetes (abnormal blood sugar levels), and seizures (bursts of uncontrolled electrical activity in the brain that causes abnormalities in muscle tone or movements).				
	During a review of Resident 2's Minimum Data Set (MDS), a resident assessment and care-planning tool, dated 4/25/2021 indicated Resident 18 had no cognitive (thought) impairment with daily decision making.				
	During a review of the Resident Co lights were not being answered in a	ouncil minutes dated 4/13/2021 indicate a timely manner.	ed Resident 2 commented her call

residents' Gare Plan (document outlining a detailed approach to care customized to an individual resident need.) The MDS stated that medical records department had not been tracking to ensure residents have HgA1c orders but will do so going forward. The MDS stated diabetic (persons with diabetes) residents on insulin should have HgA1c levels checked every three months. The MDS stated that HgA1c is important because it shows if the insulin therapy is effective for the resident and if any changes to the medications need to be made based on the level. The MDS stated that it is important to have the right medications for diabetic residents to make sure their BS levels are stabilized so that they do not have complications like coma, get hospitalized or die. The MDS stated all diabetic residents should have a baseline HgA1c when admitted and that lab services did not stop working even during COVID.  During an interview on n 5/11/21 at 11:51 a.m., the DON 2 stated carrying out the orders given by physicia are important, especially for diabetic residents. The DON 2 stated documentation is basic nursing function The DON 2 stated if the MAR had gaps and was not signed, then it was understood the BS orders were not carried out, and the insulin doses were not administered. The DON 2 stated HgA1c should be ordered at admission for diabetic residents and re-ordered every three months to know if the medications are working The DON 2 stated that the diabetes care plan should include the monitoring for HgA1c. The DON 2 stated BS levels were not checked and insulin doses not given then the residents could have low or high BS level were into coma, get hospitalized, have ketoacidosis (serious diabetes complication where the body produce excess blood acids), and even die.  During a phone interview on 5/11/21 at 12:40 p.m., during a phone interview, the Medical Doctor (MD) 1 stated she usually orders HgA1c levels and when she overlooks to order the level, she gets reminded by the PM produce and the produce of the residents and produ	(X4) ID PREFIX TAG

F 0760	Findings:				
Level of Harm - Immediate jeopardy to resident health or safety  Residents Affected - Some	a) During a review of Resident 2's Admission Record (Face Sheet), dated 5/10/21, the Face Sheet indicated Resident 2 was initially admitted to the facility on [DATE] with a diagnosis of diabetes (a condition characterized by high levels of BS which can lead to serious damage to the heart, eyes and kidneys [pair of organs responsible for filtering waste materials out of the blood and passing them out of the body as urine, and regulating blood pressure of the body]).				
	During a review of Resident 2's Medication Administration Record (MAR), for the review periods of 4/2021 through 5/2021, the MAR indicated Resident 2 was prescribed Lantus 20 units in the morning, hold if BS less than 100, subcutaneously before meals and at bedtime and per sliding scale. Resident 2's MAR indicated that a total of 21 BS levels were not documented, seven (7) doses of Lantus were not signed as administered, and 18 doses of Humulin R as per sliding scale were not signed as administered to Resident 2.				
	During a review of Resident 2's undated Care Plan titled, Diabetes Mellitus, dated 3/21/2021, the care plan indicated to give diabetic medications as ordered by the physician, and check fasting serum (blood) BS.				
	b) During a review of Resident 6's Face Sheet, dated 5/10/21, the Face Sheet indicated Resident 6 was admitted to the facility on [DATE] with a diagnosis of diabetes.				
	During a review of Resident 6's Order Summary Report, dated 5/10/21, the report indicated Resident 6 was prescribed Novolin R as per sliding scale subcutaneously before meals and at bedtime and Levemir 15 units subcutaneously two times a day and to hold for BS less than 100.				
	During a review of Resident 6's Blood Glucose Monitoring ([BGM] - where the insulin doses and BS are documented) log between 4/1/21 and 5/10/21 indicated a total of 27 BS levels not documented, 12 doses of Levemir were not signed as administered, and 15 doses of Novolin R as per sliding scale were not signed as administered.				
	1	dated Care Plan titled, Diabetes Mellitu sting serum BS as ordered by doctor.	s, the care plan indicated to give		
	c) During a review of Resident 7's Face Sheet, dated 5/10/21, the face sheet indicated Resident 7 was admitted to the facility on [DATE].				
	Review of Resident 7's Order Summary Report, dated 5/10/21, the report indicated on 3/18/21 Resident 7 was prescribed Glargine 5 units subcutaneously one time a day, to hold if BS less than 100, and Insulin Regular as per sliding scale subcutaneously three times a day AC meals and HS.				
	During a review of Resident 7's BGM dated 4/1/21 to 5/10/21, the BGM indicated a total of 11 BS levels not documented, 3 doses of Glargine and 8 doses of Insulin Regular sliding scale were not signed as administered to Resident 7.				
	During a review of Resident 7's Care Plan titled, Diabetes Mellitus, dated 1/21/21, the care plan indicated to give diabetic medications as ordered by the doctor.

F 0919	Make sure that a working call system is available in each resident's bathroom and bathing area.				
Level of Harm - Minimal harm or potential for actual harm	39028				
Residents Affected - Few	Based on observation, interviews, and record review facility failed to ensure one of one sampled residents (Resident 60) had the call light within reach.				
	This deficient practice had the potential for accidents, including falls, and resulted in the delay of assisting Resident 60 with a drink of water.				
	Findings:				
A review of Resident 60's undated admission record indicated the facility admitted Resident Resident 60's diagnoses included acquired absence of right leg below knee, muscle weakned (tissue death caused by lack of blood supply), sepsis (A life-threatening complication of an incomplete the complete the facility admitted Resident Reside					
	A review of Resident 60's Minimum Data Set (MDS), an assessment and care-screening indicated the Resident 60 had impaired cognition (does not have full capacity to understaunderstood by others). Resident 60 required extensive assistance from staff with bed mo and from bed, chair or a standing position, moving from one location to another, dressing and personal hygiene.				
	A review of care plan for activities of daily living (ADL - activities necessary for independent living), dated 4/12/21, indicated Resident 60 had a self-care deficit. The care plan indicated Resident 60 required extensive assistance from staff for ADLs. There care plan indicated that staff were to encourage the use of the call light for assistance and to extensively assist Resident 60 with eating and hydration needs.				
	On 5/5/21, at 11:35 A.M., during the facility tour, Resident 60 was observed raising their right hand. During a concurrent interview with Resident 60, Resident 60 stated he needed help getting up and needed to drink water. Resident 60's call light was observed behind the head of bed. Resident 60 stated he did not know where the call light was. Following a subsequent observation and concurrent interview with a director of nursing (DON 1), DON 1 confirmed that Resident 60's call light was placed behind Resident 60's head of bed and was not within reach. Resident 60 verbalized to DON 1 that he could not reach the call light and needed a drink of water. DON 1 was observed to move the call light within reach for Resident 60 allowing Resident 60 to use the call light. Once a certified nurse assistant (CNA 2) responded, CNA 2 acknowledged that Resident 60's call light was supposed to be placed within reach to avoid accidents and resident been frustrated calling for help.
