F 0656 Level of Harm - Minimal harm or potential for actual harm Residents Affected - Some	Registered nurse (RN) #1 was interviewed on 4/19/21 at 1:13 p.m. She said the facility had an MDS coordinator completing the MDS assessments remotely. She said she was gone for a while and when she came back, she was told to help complete the resident care plans that were approximately 70 care plans behind. She said they were working at getting the care plans caught up. She said the facility was trying to hire another MDS coordinator. She said the wound nurse was the person responsible for completing the care plans related to wounds. She said they had been behind since about August-September 2020. She confirmed there were no skin care plans for this resident in his chart prior to the survey. The MDS coordinator was interviewed on 4/19/21 at 2:00 p.m. She said she has completed MDSs in this building since December 2020. She said she completed the MDSs virtually. She said she looked at all of this resident's information on admission and she did not see anything related to wounds in the resident's chart.		
	The wound registered nurse (WRN) was interviewed on 4/20/21 at 9:12 a.m. She said she was the staff member who completed the skin care plans. She acknowledged it was not done and it was overlooked. 43134		
	III. Resident #166 (cross-reference F684 quality of care)		
	A. Resident status		
	Resident #166, age 64, was admitted on [DATE]. According to the April 2021 computerized physician orders (CPO), diagnoses included amputations of two left toes, peripheral vascular disease, osteomyelitis (bone infection) of right ankle and foot, diabetes, gastrointestinal hemorrhage, melena, atrial fibrillation.		
	interview for a mental status (BIMS walking, eating and personal hygie	OS) assessment revealed the resident vibility (S) score of 15 out of 15. He required sunce and one person assistance with becalth condition for internal bleeding, he was the condition for internal bleeding, he was the condition for internal bleeding.	pervision with setup for transfers, d mobility, dressing and toilet use.
	B. Record review		
	the resident while he was on blood	ent #166 revealed he did not have a for thinning medications Plavix, aspirin ar of cardiovascular disease and surgica	nd Lovenox injections, which were
	anticoagulation and antiplatelet, Pla	sident #166 revealed that the resident havix, aspirin and Lovenox injection. The lent for abnormal bleeding, examples, i	e electronic medical record (EMR)

F 0684	Provide appropriate treatment and care according to orders, resident's preferences and goals.			
Level of Harm - Actual harm	**NOTE- TERMS IN BRACKETS H	IAVE BEEN EDITED TO PROTECT C	ONFIDENTIALITY** 43134	
Residents Affected - Few	Based on observations, record review and interviews, the facility failed to provide treatment and care in accordance with professional standards of practice for three (#166, #118 and #146) of seven residents out of 68 sample residents.			
	Resident #166 who was admitted on [DATE], with a known history and diagnosis of gastrointestinal (GI) hemorrhage (bleeding) and anemia was monitored closely for signs and symptoms of internal bleeding while being given anticoagulant medications. Resident #166 complaint of tarry stools and stools with bright red blood to RN#6 and was concerned regarding another GI hemorrhage given his history.			
	The facilities failures to monitor and identify timely the signs and symptoms of internal bleeding to provide necessary treatment, lead to Resident #166 calling the ambulance himself and was transferred to the hospital. Resident #166 was pale upon admission to the hospital, had blood in his stool was diagnosed with gastrointestinal hemorrhage, his hemoglobin level was 7.1 and he transfused with one unit of PRBC (packed red blood cells) (see record review below).			
	Furthermore, when RN#6 was informed of complaints of bleeding by Resident #166, her intervention was to give the resident a container so the stool could be visualized when he had another bowel movement. RN#6 failed to fully assess the resident at the time of his complaint or notify other staff for assistance as she was attending to another emergency situation with another resident.			
	No vitals were taken, the physician was not notified of the status change for the resident, during shift report this information was not passed on to the oncoming staff, and Resident #6 never went back to check on Resident #6 before leaving.			
	Moreover, the facility failed to have a person centered care plan or orders to effectively monitor for bleeding when Resident #166 and #146 were on anticoagulant medications.			
	Additionally, the facility failed to:			
	-Assess and document Resident#1 several days;	18's bowel condition following complain	nts of having constipation for	
		order with the proper medication name suppository administered to Resident		
	-Document the administration of a administration record; and,	suppository given to Resident #118 on	the resident's medication	
	-Follow up on the results/effects of	a suppository administered to Residen	t #118.

F 0684 Level of Harm - Actual harm	[NAME] A. M.; [NAME], H. from the National Center for Biotechnology Information (last update August 24, 2020) Gastrointestinal bleeding, Enhancing Healthcare Team Outcomes retrieved from: https://www.ncbi.nlm.nih.gov/books/NBK537291/. It read, [NAME] (stool with blood) is dark, black, and tarry feces that typically has a strong characteristic odor caused by the digestive enzyme activity and intestinal bacteria on			
Residents Affected - Few	hemoglobin Care of patients with gastrointestinal bleeding requires coordinated and efficient interprofessional cooperation. Nurses manage the frequent monitoring of vital signs and more short-term interaction with and observation of patients. They must communicate their findings with the physicians, who use their own and nursing observations to make decisions for treatment. Multiple physicians may be necessary for treatment. General internists are typically responsible for the routine care of patients with GI bleeds A coordinated effort by all of these healthcare professionals functioning as an interprofessional team is necessary for early recognition and intervention in gastrointestinal bleeds to prevent further morbidity or mortalities. The measures to monitor a patient on blood thinning medications for abnormal GI bleeding include symptoms like change in bowel habits like diarrhea or melena, abdominal pain, retching or vomiting. Also to consider their history of prior GI bleeds, medications that can cause abnormal bleeding in the GI system. Laboratory values can be used to monitor a resident on these types of medications are, complete blood count hemoglobin and hematocrit, INR/PT/PTT if appropriate, lactate or liver function tests. II. Facility policy			
	The Change in Condition and Physician and Family Notification policy was received by the assistant nursing home administrator (ANHA) on 4/20/21 at 10:00 a.m. It read in pertinent part, when a resident has a significant change in their physical status with an example of bleeding, the licensed nurse was required to contact the physician or designated on-call provider. Each attempt required to be charted in the resident's record with information about the provider, what they said and what information was given to that provider.			
	III. Resident #166			
	A. Resident status			
	Resident #166, age 64, was admitted on [DATE]. According to the April 2021 computerized physician orders (CPO), diagnoses included amputations of two left toes, peripheral vascular disease, Osteomyelitis (bone infection) of right ankle and foot, diabetes, gastrointestinal hemorrhage, melena, atrial fibrillation, chronic obstructive pulmonary disease, anemia, coronary artery disease with surgery of the circulation system.			
	The 4/15/21 minimum data set (MDS) assessment revealed the resident was cognitively intact with a brief interview for a mental status (BIMS) score of 15 out of 15. He required supervision with setup for transfers, walking, eating and personal hygiene and one person assistance with bed mobility, dressing and toilet use. The MDS further documented a health condition for internal bleeding, he received anticoagulant medication

(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)			
F 0684 Level of Harm - Actual harm Residents Affected - Few	Resident #166 was interviewed on 4/12/21 at 4:09 p.m. He said he alerted registered nurse (RN) #6 on 4/4/21 about 5:30 p.m. that he had blood in his stool. He said his stools were black and tarry for the past three days before his last bowel movement that day (4/4/21) which had red blood in it and he was concerned. He said RN #6 asked him to use a hat in the toilet to collect his stool so she could assess it because he had flushed the one he reported to her.			
	He said he did not hear from the nurse for almost an hour. He said he felt worried and angry about the bleeding as if the facility staff did not care, so he called an ambulance to go to the hospital. When he arrived at the hospital, he was given a blood transfusion and admitted for four days for monitoring.			
	C. Record review			
	On admission to the facility it was documented in the resident's record that he had a history of a GI bleed and there was no order to monitor him for abnormal bleeding in place. The resident's electronic medical record (EMR) during his initial stay at the facility (3/31/21 to 4/4/21) did not include laboratory results.			
	-Additionally, there was no care plan in place to monitor for bleeding until 4/12/21 after the resident was transferred to the hospital (see below).			
	The 4/2/21 nurse practitioner admission summary documented the resident had a history of a GI bleed with required surgical intervention to place a clip on a duodenal visible vessel. It further documented in his history the resident had anemia, cardiovascular surgery and was placed on three medications for blood thinning, Plavix, Aspirin and Lovenox injection.			
	The April 2021 physician orders for mg (milligrams) by mouth one time	Resident #166 revealed orders were in a day for pain;	nitiated on 3/31/21 for; -Aspirin 81	
	-Clopidogrel Bisulfate, 75 mg, give	one tablet by mouth one time a day;		
		g/0.4ml inject 40 mg subcutaneously a pon his first admission to the facility.	t bedtime for anticoagulation.	
	The progress note by LPN #4 on 4/4/21 at 9:50 p.m. revealed, Resident #166 was not in his room a went to the resident's room to administer scheduled medications. He notified the unit manager and was initiated. Later that evening the unit manager cancelled the search because the resident's locat known (the resident had transferred himself to the hospital). The progress note by RN #6 on 4/5/21 at 6:21 a.m. as a late entry read, Resident #166 notified her black stool so she gave him a hat to put in his toilet to collect stool and he said he knew how to colle sample. In her assessment he denied other abnormal bleeding and his general appearance was ok-			
	-There was no documentation that the resident's vital signs were taken, the physician was notified, or the resident had been transferred or requested to go to the hospital.

Based on the experience with his medical history, he described what he knew to look for in his stools and other symptoms. D. Staff interview Registered nurse (RN) #11 was interviewed on 4/20/21 at 3:30 p.m. He stated resident's are monitored for signs of abnormal bleeding when they were first admitted or when they began a medication that was a bloot thinner. The orders were used to identify resident's medications and what to monitor them for. When a symptom was identified, nurses obtained vital signs and performed an assessment and needed to noti		-At 7:10 p.m. the emergency room hemoglobin of 7.1 and hematocrit of transfusion of packed red blood cel	doctor's progress note read, the reside of 21.7. He was actively bleeding and o lls (PRBC) with his current condition, as	ent had a low blood count for ordered to give the resident a	
hemoglobin was less than eight with a history of coronary artery disease, had a recent stent placed and had received blood transfusions in his past. Review of the medication administration record (MAR) revealed an order to monitor for abnormal bleeding which was originated on 4/12/21 upon return from his hospital stay from 4/4/21 to 4/9/21 (this was 13 days after his original admission on 3/31/21). The history and physical dated of the encounter on 4/12/21 by the Physician read, the resident had a short hospital stay because he had melena for two to three days and was treated for a GI hemorrhage. In November of 2020, the resident had a hospital stay for a surgical intervention for coronary artery disease with a stent placement. The care plan focus area for anticoagulant and antiplatelet therapy, was initiated on 4/12/21 (after his admission to the hospital see original admitted [DATE] above) related to the resident's history of a GI bleed. Interventions included, to monitor the resident's vital signs and notify the provider of significant changes, monitor for discolored urine, bright red blood or black tarry stools and other signs of abnormal bleeding. -The resident said he wanted to be involved in making his health care decisions. Based on the experience with his medical history, he described what he knew to look for in his stools and other symptoms. D. F 0686 Level of Harm - Immediate jeopardy to resident health or safety Residents Affected - Few	Review of Resident #127's record (set forth below) revealed the resident entered the facility on 2/3/21 with one deep tissue injury (DTI). As of 4/20/21, the resident had six pressure injuries: a left heel blister (acquired 4/12/21); an unstageable pressure injury to the right buttock (acquired 4/5/21); an unstageable pressure injury to the left lateral foot (acquired 2/18/21); a DTI to the right heel (acquired 2/18/21); a stage 4 pressure injury sacrococcyx extending to bilateral buttocks (2/23/21); and a DTI to the right plantar foot (acquired 4/20/21). B. Resident observations and interview indicated the facility failed to timely, adequately and consistently respond to the resident's pressure injury risk.		
	The resident was observed and interviewed in his room on 4/12/21 at 2:19 p.m., 4/14/21 at 1:55 p.m., and 4/15/21 at 10:16 a.m. and at 11:23 a.m.		
	not have when he arrived at the fac	•	
		nt was seated in his wheelchair. His fe pedals. No pillow was underneath or b	
	On 4/15/21 at 10:16 a.m., the resident was seated in his wheelchair, again without a pehind his feet or any type of heel protection. He said the staff never offered a pillow f he had a big blister. When asked about nutrition (see diagnoses above), he said the fa him on double meats for all meals about a week ago. He said he had tried previous su like the taste. He said he had not tried any homemade milkshakes or fortified foods. He depended on the meal. He said he felt like the staff was upset about feeding him becat assistance. He said the food arrived at 11:30- 12:00 p.m. and they did not feed him ur said the food was always cold.		
	On 4/15/21 at 11:23 a.m., he was seated in his wheelchair. A pillow was underneath his heels. When interviewed at noon, he said he had to ask for a pillow and this was the first time they had placed a pillow underneath his heels. He also said he had a different mattress when he first arrived at the facility, but now had a special mattress.		
	The resident was observed with a pillow underneath his heels throughout the remainder of the survey, indicating compliance.		
	C. Record review 2/3/21 to 2/25/21, 3/1/21 to 4/12/21 and 4/12 to 4/20/21 confirmed the facility failed to timely and adequately identify and respond to known risks in order to heal pressure injuries and to prevent additional skin breakdown and failed to comprehensively and consistently address barriers to heal the resident's multiple pressure injuries to promote healing. prevent infection and prevent new injuries from developing.

Level of Harm - Minimal harm or potential for actual harm	III. Resident #137			
Residents Affected - Some	A. Resident status			
residente / inected Gome	Resident #137, age 60, was admitted on [DATE]. According to the April 2021 computerized physician orders (CPO), the diagnoses included traumatic brain injury, respiratory failure with hypoxia, cerebrospinal fluid drainage device, hydrocephalus, tracheostomy, gastrostomy, intracerebral hemorrhage, persistent vegetative state, late onset of Alzheimer's disease, seizures, diabetes.			
	The 3/15/21 minimum data set (MDS) assessment revealed the resident was cognitively impaired with a brie interview for mental status score of zero out of 15. He is in a vegetative state, unable to answer for himself. He required total assistance from one person with eating. He required total dependence from two or more staff with bed mobility, toileting, personal hygiene, dressing and transfers. He required care for an indwelling catheter, tracheostomy care and included oxygen delivery, suctioning, and ventilation, as well as a feeding tube that he completely depended on for nutrition and hydration.			
	B. Record review			
	The 3/2/21 hospital discharge reco	rd revealed the resident had diagnosed is independently.	d contractures of both his hands	
	·	and last revised on 4/13/21 had interver vided gentle range of motion and passi	. ,	
	-lt did not include a specific focus a plan made by the therapy department	area with the specific cares and goals a ent.	ccording to the restorative therapy	
	The April of 2021 resident's orders areas as planned by the therapy de	were reviewed and did not reveal orde epartment.	rs for restorative program care	
	The generic restorative plan initiated on 4/9/21 for Resident #137 was received by the director of re (RD-COTA) on 4/20/21. It read in pertinent part to, the resident was discharged from physical and occupational therapies and required restorative therapy to decrease the risk of contractures (see R interview below). Upon discharge from therapy, the restorative program was to provide the residen goals for passive range of motion (PROM) for six to seven days a week to decrease the risk or wor contractures. As well as, to transfer into a wheelchair two times a day for six to seven days a week promote upper body alignment.			
	The form also read, Restorative plan and restorative order should reflect the above data. Upon discharge form should be provided to the Restorative Nurse Manager and Restorative Nurse Aide for the initiation Restorative Care.

F 0688 Level of Harm - Minimal harm or		tasks for Resident #137, revealed the ferred to a wheelchair to sit two times a	
potential for actual harm Residents Affected - Some	C. Interviews		
Nesidents Affected - Soffie	The minimal data set (MDS) nurse was interviewed on 4/14/21 She stated that she is the MDS nurse that works virtually to complete the resident's assessments and used the electronic medical record to complete the MDS for the resident 's. She said, the restorative care plans were behind including the restorative care plan and documentation was not completed for most residents.		
	Restorative aide (RA) #3 was interviewed on 4/19/21 at 1130 a.m. He stated that he is one of the restorative nurse aides that works on the El Dorado unit. He works at least two days per week on the floor as a CNA, if not more often. When he works on the floor that often, he is not able to provide the restorative therapy the resident's need. Cross-reference F725		
	RA #7 was interviewed on 4/19/21 at 1:30 p.m. She stated that she had four shifts a week and was a restorative aide. She worked as a CNA on the floor three to four times a week in place of providing restorative program care. Another restorative aide that works with RA #7 worked at the facility Tuesday through Fridays and worked as a CNA unable to provide restorative program needs as well. The RD-COTA was interviewed on 4/20/21 at 1:30 p.m. She stated Resident #137 had Physical and Occupational therapy for his first 30 days at the facility. When he met his maximum potential for rehabil he was discharged from PT and OT on 4/9/21 and restorative therapy was ordered and initiated on 4/9/		
	The assistant director of nursing (ADON) was interviewed on 4/21/21 at 4:35 p.m. He said the resident's passive range of motion (PROM) was an incorporated task in the electronic medical record (EMR) and completed by the CNA's.		
	The director of nursing (DON) was interviewed on 4/21/21 at 4:35 p.m. She said the ADON was appointed to the position as the restorative program nurse about two months prior. The administration team had identified the restorative program had problems because the restorative aides were not able to complete their tasks.		
	38503		
	IV. Resident #8		
	A. Resident status		
	Resident #8, age less than 60, was admitted on [DATE]. According to April 2021 CPO, diagnoses included polyneuropathy, asthma, diabetes mellitus, difficulty walking, muscle weakness, depressive episodes, acute embolism and thrombosis.		
	The 1/4/21 MDS assessment revealed the resident was cognitively intact with a BIMS score of 15 out of 15. He required limited one-person assistance with most activities of daily living (ADLs) and one-person physical help in part of bathing activity.

	D. Staff interviews (Cross reference	e F725)		
	Restorative aide (RA) #4 was interviewed on 4/14/21 at 12:44 p.m. She said she had been pulled to the floor frequently for the last three months (including today) and did not complete the residents' restorative programs.			
	RA #3 was interviewed on 4/19/21 at 11:30 a.m. He stated that he was one of the restorative nurse aides that worked on the Eldorado unit. He worked at least two days per week on the floor as a CNA, if not more often. When he worked on the floor that often, he was not able to provide the restorative therapy the resident's needed.			
	RA #7 was interviewed on 4/19/21 at 1:30 p.m. She stated that she worked four shifts a week and was a restorative aide. She worked as a certified nurse aid (CNA) on the floor three to four times a week in place of providing the restorative care program.

	IV. Staff interviews		
	LPN #6 was interviewed on 4/19/21at 9:18 a.m. She said on 11/14/2020 at 3:45 p.m. after the resident sustained his third fall of the day, she felt the resident was injured because he was in a lot of pain and he was moaning loudly. She said she notified the physician on-call of his pain and inability to straighten his le leg but he did not order x-rays or pain medication. He was on palliative care so she called that RN and received an order for x-rays. She said she only worked weekends and left shortly after she documented the incident and another nurse took over. She did not offer an explanation as to why the MD was not notified to obtain a pain medication order.		
	LPN #10 was interviewed on 4/19/21 at 12:35 p.m. She said when the resident fell on [DATE] at 12:15 p. even though he was pointing to and rubbing his left knee, she did not think anything of it because he wor point at different areas at different times. She said she did not consider him injured at that time. She said had heard that after she left for the day he fell again and when the physician was notified he still would norder any x-rays or pain medication. She said she did not understand why the physician would do that. The minimum data set (MDS) coordinator was interviewed on 4/19/21 at 2:16 p.m. She said she would e a fall care plan if she happened to catch one that was missing. She said there was a team of staff that we responsible for putting in fall care plans and it was not normally her job. RN #3 was interviewed on 4/19/21 at 4:53 p.m. He said he was called to the 1100 hall to assess the Resident #161 when he fell at 12:15 p.m. on 11/14/2020. He said the resident was normally up walking around but when he fell and they tried to assist him to stand he was moaning loudly and holding his left k He said it was clear the resident was in quite a bit of pain and he was afraid he may have dislocated or fractured his hip. He said once he did his assessment and told the resident's nurse to notify the physician and the DON, he went back to his hall.

(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)		
F 0725 Level of Harm - Minimal harm or potential for actual harm	CNA #9 was interviewed on 4/17/21 at 10:15 p.m. She said she was agency staff and that the facility had tried to quit using agency staff but nobody wants to work here so they were calling them again. She said she was working a double shift, she had worked the day shift too. She said on the day shift a CNA had called in so she could not keep up to get all her work done and the nurse had to help her.		
Residents Affected - Many	CNA #2 was interviewed on 4/17/21 at 10:40 p.m. He said he worked 10:00 p.m. to 6:00 a.m. night shift for the last five years. He said most of the time on night shift there were only two CNAs when they needed three. He said he would ask the nurse for help but often were too busy. He said when they worked short he could not turn the residents or provide incontinent care every two hours during his shift like he was supposed to. He said the last time they worked with two CNAs was last week.		
	RA #3 was interviewed on 4/19/21 at 11:30 a.m. He stated that he was one of the restorative nurse aides that worked on the Eldorado unit. He worked at least two days per week on the floor as a CNA, if not more often. When he worked on the floor that often, he was not able to provide the restorative therapy the resident 's needed.		
	RA #7 was interviewed on 4/19/21 at 1:30 p.m. She stated that she worked four shifts a week and was a restorative aide. She worked as a CNA on the floor three to four times a week in place of providing the restorative care program so this was not being done.		
	LPN #2 was interviewed on 4/20/2 She said she did as much as possi	1 at 12:47 p.m. She said they did not h ble to provide care.	ave enough staff, mostly CNAs.
	CNA #20 was interviewed on 4/20/21 at 2:07 p.m. She said she was at the facility today because a staff member had called off. She said there was not enough staff. She said the nurses did not help much with care or call lights. She said she always had to stay late to get her work done.		
	LPN #7 was interviewed on 4/20/21 at 3:13 p.m. He worked the 1100 hall and was supposed to have two CNAs on the evening shift and usually did not get them. He said his hall had several total assist residents that took up half the CNAs time on the shift. He said staff often did not get showers done because there is not enough help. He said at times there usually was just six CNAs instead of eight on the Golden gate unit.		
	at 11:01 a.m. They said for over a	IR) and staff development coordinator month no one was assigned to comple chedule to ensure there was enough st	te the schedule so all managers

F 0725 Level of Harm - Minimal harm or potential for actual harm	UM #3 said the Eldorado/Rapid recovery unit census frequently fluctuated because of its admissions and discharges. He said today (4/20/21) the census was 41 and typically there would be five nurses and five CNAs on the unit for day and evening shift and two nurses and three to four CNAs at night.			
Residents Affected - Many	I .	no required 1:1 care so a total of six CN d there were some care concerns surre	•	
	The NHA, DON and assistant director of nursing (ADON) were interviewed on 4/21/21 at 4:38 p.m. The NHA said recently they stopped using agencies as blocked booked (4 week or 8 week contracts) and now were utilizing them as needed. She said recently the facility hired a lot of new staff and management had been helping with the schedule to ensure the same restorative staff had not been pulled to the floor so often.			
	-She said the facility considered putting some measures in place to stagger the restorative aides who had been pulled to the floor, so that maybe they were not on the floor the entire shift and could complete some of their restorative tasks.			
	The NHA said the facility felt they were staffing appropriately because there were no grievances related to call lights.			
		ed on call light times. Resident cares w ff were scheduled. Cross reference, F5		
	VIII. Follow-up			
	A quality assurance improvement plan dated November 2020 for Staffing was provided by the NHA on 4/22/21 at 9:15 a.m. documented under the area of concern read, recruiting and retention. Recruiting efforts included the following:			
	Advertise, complete a wage analys	is (October 2020);		
	-Utilize applicant tracking system to 2021/ongoing);	source candidates and set up intervie	ws (October 2020, March	
	-Corporate recruiter and corporate (November 2020);	HR assigned to assist the facility with r	recruitment and hiring efforts	
	-Word of mouth referral (March 202	21);		
		April 2021) and flew in additional nurse it during the survey 4/12/21 to 4/22/21)	•	
	-Implemented and recruited hospita	ality aides, added agency contracts, on	going;	
	-Added agency contracts x 3 (three	e) (no date of implementation or review));

F 0758	Resident #118's April 2021 CPO re	evealed the following physician orders:		
Level of Harm - Minimal harm or potential for actual harm	-Trazodone HCl 100 milligrams (M	G) tablets; give one (1) tablet at bedtim	e related to insomnia.; and,	
Residents Affected - Some	-Monitor hours of sleep every shift	for insomnia.		
	A physician's visit note dated 3/25/21. The note revealed the resident was seen for Insomnia. The note real in pertinent part: On Trazodone. Has orders to monitor hours of sleep, no documentation for months. Assessment and plan: Insomnia, unspecified: chronic condition, clinically controlled, continue current regimen. New order to monitor hours of sleep placed in electronic medical record. If sleeping more than eighours will order a gradual dose reduction of Trazodone to decrease polypharmacy and minimize risk for Al (side effect). Review of the resident's comprehensive care plan revealed a care plan focus for insomnia. The care focus updated 3/30/21 revealed Resident #118 used psychotropic medication including Trazodone related to insomnia. Interventions included: Administer psychotropic medications, as ordered by physician. Monitor for side effects and effectiveness every shift. Monitor hours of sleep every shift for insomnia. Consult with pharmacy and physician to consider dosage reduction when clinically appropriate.			
		, revised 1/28/21, revealed Resident # Determine if daytime napping interferes ister medication as ordered.		
	The April 2021 medication record (bedtime except for 4/2/21 and 4/7/2	MAR) revealed the resident received th 21.	ne prescribed dose of Trazodone at	
		hy the resident had not received the be king hours of sleep had check mark res t slept during the shifts.		
	-Review of progress notes for 4/1/20 through 4/15/21, revealed inconsistent documentation about Residual #118's sleep patterns; and no documentation of the resident's actual hours of sleep throughout the day night. Notes revealed the resident was napping throughout the day and evening on various occasions.			
	-Review of certified nursing aide (C hours of sleep.	CNA) documentation did not reveal any	documentation for monitoring	
	4. Staff Interviews			
	CNA #10 was interviewed on 4/18/21 at 11:34 a.m. CNA #10 said Resident #118 takes frequent naps throughout the day. The nurses would track and notify the resident's doctor about a resident's sleeping patterns and the CNAs would notify the nurse if they observed any concerns with the resident's sleep or of sleep.

Level of Harm - Minimal harm or potential for actual harm	38503			
Residents Affected - Some	Based on observations, record reviewerror rate of five percent (%) or gre	iew, and interviews, the facility failed to ater on two of three units.	ensure it was free of a medication	
	Specifically, the medication admini opportunities for error.	stration observation error rate was 8%,	or two errors out of 25	
	Findings include:			
	I. Facility policy			
	The Medication Administration General Guidelines policy, updated September 2018 was provided by the nursing home administrator on 4/19/21 at 11:30 a.m. It documented, in pertinent part, Medications are administered as prescribed in accordance with manufacturers' specifications, good nursing principles and practices and only by persons legally authorized to do so. Personnel authorized to administer medications do so only after they have familiarized themselves with the medications. If it is safe to do so, medication tablets may be crushed or capsules emptied out when a resident has difficulty swallowing or is tube-fed, using the following guidelines and with a specific order from the prescriber. The need for crushing medications is indicated on the resident's orders and the MAR (medication administration record) so that all personnel administering medications are aware of this need and the consultant pharmacist can advise on safety and alternatives, if appropriate, during Medication Regimen Reviews. Long-acting, extended release or enteric-coated dosage forms should generally not be crushed; an alternative should be sought.			
	II. Professional reference			
	MedlinePlus Lidocaine Transdermal Patch, (updated 4/16/21), retrieved on 4/28/21 from: https://medlineplus.gov/druginfo/meds/a603026.html read, in pertinent part, Never apply more than three patches at one time, and never wear patches for more than 12 hours per day. Using too many patches or leaving patches on for too long may cause serious side effects.			
	III. Observations of medication error	ors and staff interview		
	Registered nurse #10 was observed preparing Resident #81's medications on 4/14/21 at 5:15 p.m. RN #10 prepared Protonix 40 mg (milligrams) one tab, Coreg 6.25 mg three tabs and Gabapentin 600 mg. The resident stated she was having trouble swallowing so RN #10 placed Resident #81's medications in a plastic sleeve and crushed them and administered them to the resident.			
	-RN #10 said she was not aware she should not crush Protonix. She acknowledged there was no order to crush the resident's medications.

Level of Harm - Immediate jeopardy to resident health or safety	-At 8:38 a.m. there was a urinal, co	ontaining urine, on the overbed table ne lass containing ice water next to the uri	ext to the resident 's bed in room
Residents Affected - Few	-At 8:40 a.m. LPN #1 was observed during tracheostomy (trach) care for Resident #13. She sanitized her hands and applied a gown and gloves. She then typed on her computer keyboard and used the computer mouse then swiped and typed on a tablet screen. The resident had thick yellow sputum coming from the trach and pooled on his chest below his trach. She entered the resident 's room, picked up his urinal and emptied it. She donned new gloves and removed items he had on his overbed table.		eyboard and used the computer vellow sputum coming from the s room, picked up his urinal and
	She used Versa Sure bleach wipes, with a dwell time of two minutes, to clean the top of the overbed table She did not allow the surface to dry and placed the package of trach suctioning supplies on top of the table as well as the tubing connected to the suction machine, she then turned the machine on. She placed all of sterile water on the table that she obtained from on top of a nearby cabinet. She then retrieved the package of sterile gloves from the tray and placed it on the wet surface of the overbed table and donned gloves. Wearing the sterile gloves, she opened the bottle of sterile water, picked up the sterile suction catheter a connected it to the suction tubing. She then entered the tracheostomy with the suction catheter but couls suction any sputum. She removed the plastic inner cannula of the trach. She suctioned the trach then cut the sterile catheter into her left unclean gloved hand. She then took the yellow sputum covered inner cat to the handwashing sink in the room, rinsed it, and shook it a couple times in the air. She then went to the suction tray, held the inner cannula over the tray and poured sterile water through the middle of it and replaced it in his trach.		
	items in the drawer looking for gausupplies on top of it, and moved se there, I don't think it snapped. She	e moved the overbed table, opened the ze pads. She then went to a cabinet at everal of those items. The resident aske then obtained a hard plastic ([NAME]) lick yellow sputum off his chest. F 0880 Level of Harm - Immediate jeopardy to resident health or safety Residents Affected - Few	SUMMARY STATEMENT OF DEFICIENCIES [Each deficiency must be preceded by full regulatory or LSC identifying information) The WRN was interviewed on 4/20/21 at 12:00 p.m. She said she used the scissors that were in the treatment cart for all wound dressing changes. She said well, I disinfect them when I use them by wiping them with an alcohol pad. She said the facility had disposable scissors she could use but she had not considered using a separate pair for each resident. She was unaware she did not pack the resident's coccyx/sacral wound per the physician's order. She said she could do it when he was back in bed. She was unaware of the breaks in infection control during the wound care. The DON was interviewed on 4/21/21 at 11:30 a.m. She said she was made aware of the breaks in infection control during trach care because she was made aware of the breaks in infection control during trach care because she wanted to be sure she was doing it right. The DON said they would provide education to both nurses that were observed during trach care. She said they would also set up re-trainings for the nursing staff with the respiratory therapist. She said when she was made aware of the observation of wound care with the WRN, that nurse was removed from the floor and a corporate nurse took over wound care. The DON was interviewed again on 4/21/21 at 4:40 p.m. She stated gloves used to provide resident incontinent by CNA 's or nurses, needed to be discarded properly and then the staff needed to perform hand hygiene before other surfaces were touched. The DON was interviewed at hird time on 4/22/21 at 8:30 a.m. She said male resident urinals should not be placed on the overbed tables next to food or drinking items. She said some residents prefer it to be on the table but she said it was an infection control issue and she would provide education to staff and residents to place the urinals in a different location to eliminate the potential for cross contamination. She said the drink cart that was brought up to the second f

F 0880 Level of Harm - Immediate jeopardy to resident health or safety Residents Affected - Few	-At 9:08 a.m. the DON provided documentation of education to SS #2 per phone, as she was not in the facility at this time, related to donning the appropriate PPE prior to entering a quarantine room regardless whether it was a family member. She said SS #2 was off today and when she returned she would be required to perform a return demonstration of appropriate donning and doffing of PPE. She also said at this time the unit managers were making rounds to all male residents who use urinals providing education and updating care plans. -At 9:17 a.m. the DON said all care plans on the Eldorado unit had been updated for the male residents that
