| or potential for actual harm Residents Affected - Few | Based on observations, record review and interviews, the facility failed to ensure the resident's right to receive services in the facility with reasonable accommodation of the resident needs and preferences for one (#7) of three residents out of 24 sample residents.  |   |   |  |
|   | Specifically, the facility failed to ensure Resident #7 was provided with a bed that was long enough to fit his height.  |   |   |  |
|   | Findings include:  |   |   |  |
|   | I. Resident status   |   |   |  |
|   | Resident #7, under the age of 65, was admitted on [DATE] and readmitted on [DATE]. According to the May 2022 computerized physician orders (CPO), the diagnoses included type two diabetes mellitus (DM2), aphasia, and cellulitis of right lower extremity.   |   |   |  |
|   | The 5/19/22 minimum data set (MDS) assessment revealed the resident had moderate cognitive impairment with a brief interview for mental status score of nine out of 15. He required extensive assistance of two people for bed mobility, transfers, toileting; limited assistance of two people for dressing; set up assistance for eating; and extensive assistance of one person for personal hygiene. |   |   |  |
|   | It indicated the resident was 189 pe   | ounds and 75 inches (six foot three inc                               | hes).                                       |  |

Any deficiency statement ending with an asterisk (\*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

| (X4) ID PREFIX TAG  | SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)   |  |   |  |
| F 0677  Level of Harm - Minimal harm or potential for actual harm | On 5/25/22 at 11:30 a.m. Resident #11 was observed sitting in a high back wheelchair in the dining room, facing the television. The resident's fingernails on both hands were observed to be long, approximately a quarter to a half inch in length, and jagged. The resident's fingernails appeared yellowish in color with darkened matter near the cuticle of the middle finger and pointer finger of the resident's right hand.          |  |   |  |
| Residents Affected - Some   | On 5/26/22 at 10:40 a.m. Resident past the tip of his fingers and were   | #11 was observed in his room. His fing jagged.   | gernails extended a half an inch            |  |
|   | On 6/1/22 at 9:56 a.m. the resident  | t's fingernails remained unchanged.  |   |  |
|   | 2. Record review   |  |   |  |
|   | The ADL care plan, initiated on 10/8/18 and revised on 10/26/2020, documented the resident was at risk for decreased ability to perform ADLs related to impaired balance, dizziness, limited mobility, change in the resident's cognitive status, a traumatic brain injury with a right sided craniotomy and left sided hemiplegia. It indicated the resident required extensive assistance of one person for grooming and personal hygiene. |  |   |  |
|   | B. Resident #2 status  |  |   |  |
|   |  | on [DATE] and discharged on [DATE].<br>type two diabetes mellitus (DM2) and a  |   |  |
|   | status score of 13 out of 15. He red   | ealed the resident was cognitively intac<br>quired extensive assistance of two peop<br>ssistance of one person for personal hy | ole for bed mobility, transfers,            |  |
|   | It documented that the resident rec  | quired total physical assistance for bath  | ing.  |  |

| (X4) ID PREFIX TAG  | PREFIX TAG  SUMMARY STATEMENT OF DEFICIENC  (Each deficiency must be preceded by full re-  |  | ion)  |
| F 0677  Level of Harm - Minimal harm or potential for actual harm | He said Resident #6 and Resident #11 were scheduled to receive bathing twice per week. He said he could not remember when their showers were scheduled. He said he did not know the last time they received a shower or a bath.  |  |   |
| Residents Affected - Some   | He said fingernails were typically contact each resident's fingernails should be   | ut by the CNAs unless the resident had<br>be checked on their shower day.                                      | d a diagnosis of diabetes. He said          |
|   | He said Resident #6 required assistance to cut his nails. He said hand hygiene should be provided in the morning and before every meal. He said the CNAs were able to cut the resident's nails. He said he would the resident's nails after he was done assisting residents with lunch.  |  |   |
|   |  | interviewed on 6/1/22 at 1:27 p.m. She<br>ig schedule. She said the bathing sche                               |   |
|   |  | esidents were not receiving bathing ser<br>n a lot of POC documentation indicatin<br>vas not provided bathing. |   |
|   | She said the fingernails should be observed by the CNA on the residents shower days. She said the CNA was able to cut resident fingernails if the resident did not have a diagnosis of diabetes. She said resident fingernails should be kept short to prevent injury from scratching, unless it was the resident's preference. She said the resident's preference should be documented on the plan of care.  The director of nursing (DON) was interviewed again on 6/1/22 at 2:28 p.m. She said Resident #11 should have short trimmed nails as he often scratched himself due to involuntary movements. She said the residen recently had a tear in his percutaneous endoscopic gastrostomy (PEG) tube and the intervention the facility put into place was to ensure the resident had trimmed nails. |  |   |
|   |  |  |   |
|   | She said Resident #2 had a fungal responsible for ensuring Resident #  | infection underneath his nails. She sai<br>\$2's nails were trimmed and clean.                                 | d the licensed nurses were                  |

| F 0686  | Provide appropriate pressure ulcer   | care and prevent new ulcers from deve  | eloping.                                    |  |  |
| Level of Harm - Actual harm                         | **NOTE- TERMS IN BRACKETS H  | HAVE BEEN EDITED TO PROTECT CO   | ONFIDENTIALITY** 38185                      |  |  |
| Residents Affected - Few                            | Based on observations, record review and interviews, the facility failed to provide the necessary treatment and services to prevent pressure injuries from occurring and worsening for three (#12, #6, and #2) of five out of 24 sample residents.   |  |   |  |  |
|   | Specifically, the facility failed to ens   | sure Resident #12's pressure injury to t   | he coccyx/sacrum did not worsen.            |  |  |
|   | Resident #12, who was at high risk for developing pressure injuries, was admitted to the facility with a healing stage 2 pressure injury to the sacrum/coccyx. The facility failed to encourage the resident to reposition and follow physician orders for ensuring the resident was not up in the wheelchair for extended periods of time.  |  |   |  |  |
|   |  | ents were provided as ordered by the pl<br>esident's pressure injury to the sacrum |   |  |  |
|   | Resident #12 was admitted to the facility with a stage 2 pressure injury to her sacrum. The facility's failure contributed to the worsening of Resident #12's pressure injury worsening from a healing stage 2 to her sacrum/coccyx to an unstageable wound on 3/23/22. The resident was sent to the hospital on 4/20/22 due the fever and possible sacral wound infection. When the resident return from the hospital on 4/25/22, the sacral/coccyx wound was debrided and classified as a stage 4. |  |   |  |  |
|   | Additionally, the facility failed to:  |  |   |  |  |
|   | -Ensure treatments were provided sacrum; and,  | as ordered by the physician for Reside   | nt #6's pressure injury to the              |  |  |
|   | -Ensure Resident #2 was reposition   | ned timely.  |   |  |  |

| F 0686  | -The resident's medical record faile   | ed to show any evidence of the reason            | for the missed dressing changes.            |
| Level of Harm - Actual harm                         | G. Interviews  |  |   |
| Residents Affected - Few                            | CNA #5 was interviewed on 5/25/22 at 6:32 p.m. The CNA said the resident required a hoyer mechanical lift for all transfers. He said she was cooperative and did not refuse care. He said that she had a call light that she could request to lie down. He said that she would let him know when she was ready for bed, otherwise she stayed in her chair and watched television with her roommate.  |  |   |
|   | Licensed practical nurse (LPN) #1 was interviewed on 5/26/22 at 12:15 p.m. The LPN said Resident #12 had an unstageable pressure injury on her coccyx/sacrum which had worsened. He said she had returned recently from the hospital as she had an infection in the wound. She returned with a wound vacuum. He said that the wound physician followed the resident. He said the dressing was changed every 72 hours, however, he did not change the dressing. He said he assessed the dressing to ensure there were no leaks from the wound vacuum. He said the assistant director of nurses, the wound nurse or the wound physician was responsible to change the dressing every 72 hours or as needed.  |  |   |
|   | The LPN said the physician had placed an order that the resident was to only be up in the wheelchair for 30 minutes at a time. He said that in the beginning he would encourage the resident of the importance of lying down, however, she would refuse to lie down. He said that in the beginning he had kept encouraging the resident to lie down, however he had given up on consistently telling her the importance of lying down, as she always refused. He said that was why the wound worsened. He said that she was afraid of missing her smoking opportunities.   |  |   |
|   | The assistant director of nurses (ADON) was interviewed on 5/2/22 at 2:00 p.m. The ADON said she was familiar with the resident's sacral pressure injury. She confirmed the documentation referred to the sacral pressure injury as also the coccyx pressure ulcer. She said that the wound became large enough that it was over both the sacral and coccyx area. The ADON said the resident was admitted to the facility with a stage 2 pressure injury to the sacrum. She said that the resident was not followed by the wound physician for the stage 2. She said the nursing management were not aware the resident was non-compliant with turning and repositioning before the pressure injury worsened to unstageable. She said the resident was unable to move independently and required total assistance. She said the resident refused to lie down, as she did not want the miss her smoking breaks. |  |   |
|   | She said the resident was to be repositioned in bed every two hours, and that she was to be up for only 30 minutes up to three times a day for smoking breaks. She said the resident needed to be offered and encouraged to lie down after 30 minutes. If the resident refused, then it should be documented and the resident should be provided education on the importance of relieving the pressure on her sacrum/coccyx.   |  |   |
|   | The ADON said the wound had shown improvement for the past two weeks. She reviewed the physician order and said the licensed charge nurse on the unit was responsible for changing the dressing. She said the TAR had holes, then the treatment was not completed. The charge nurse was responsible to notify th nursing administration that the dressing was not changed, so a plan could be made.  |  |   |

| (X4) ID PREFIX TAG  | SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)  |  | ion)  |
| F 0686  Level of Harm - Actual harm  Residents Affected - Few | The wound physician was interviewed on 5/26/22 at 2:15 p.m. The wound physician said he had been following the resident for the pressure injury since 4/2/22. He said the wound was unstageable because the depth of the pressure injury could not be seen. He said that the wound was debrided as 80% of the wound was necrotic and 20% slough. He said on 4/19/22 it started to smell and she went to the hospital. The hospital debrided it and it was now a stage 4. He said when she came back from the hospital the wound was debrided again.   |  |   |
|   | He said since the debridement of the sacral pressure injury and the wound vacuum, it was beginning to the said that she did need to relieve the pressure by lying down. He was aware that she was not comp however the staff needed to provide education to the resident.  LPN #1 was interviewed a second time on 5/26/22 at 2:57 p.m. LPN #1 confirmed he did not change to dressing on the resident's sacrum pressure injury. He said when he had signed off on the May 2022 treatment administration record (TAR) it was signing off that the wound physician or the ADON had change to the dressing.   |  |   |
|   | III. Failure to ensure treatments were administered as ordered by the physician  A. Resident status   |  |   |
|   |   | on [DATE] and readmitted on [DATE]. s disease, stage four pressure injury, mit.  |   |
|   | status score of 13 out of 15. She re  | ealed the resident was cognitively intace<br>equired extensive assistance of two per<br>e assistance of one person with persor | ople with bed mobility, transfers,          |
|   | It indicated the resident had a stage   | e 4 pressure injury.   |   |
|   | B. Record review  The skin integrity care plan, initiated on 2/15/22 and revised on 4/25/22, documented the resident was for skin breakdown due to poor mobilization. It indicated the resident had an actual skin breakdown of a stage 4 pressure injury to the sacrum. The interventions included turning and repositioning the resident two hours, encouraging the resident to consume all fluids of choice during meals, observing the resident skin condition with care, pressure redistribution to the bed and chair and providing wound treatments a ordered by the physician.  The 5/24/22 wound physician progress notes documented that the resident had a stage 4 pressure injury with a status of not healed. The measurements were documented as 6 cm (centimeters) length x 6.5 cm width x 1 cm depth. It indicated the wound had a moderate amount of serous drainage wound bed with 100% granulation. It indicated the wound was improving. |  |   |
|   |   |  |   |

| (X4) ID PREFIX TAG  | SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)   |  | on)   |  |
| F 0689  Level of Harm - Minimal harm or potential for actual harm | According to the 5/12/22 minimum data set (MDS) assessment, the resident had no cognitive impairment with a brief interview for mental status (BIMS) score of 13 out of 15. No mood or behavior symptoms or rejection of care was noted. He required extensive assistance for bed mobility, grooming and toilet use. He utilized a Foley catheter, and was always incontinent of bowel.  |  |   |  |
| Residents Affected - Some   | B. Observations  |  |   |  |
|   | On 5/24/22 at 10:38 a.m. to 10:54 a.m. an unidentified resident was helping Resident #4 smoke. Resident would hold the cigarette in his mouth and would puff on it. The unidentified resident took the cigarette out on Resident #4's mouth and flicked the ash then placed it back in his mouth. Staff sat in a chair on the side an would periodically come over and check on Resident #4. The staff took the cigarette out of his mouth twice flick the ash and put it back in mouth. An unidentified CNA washed her and Resident #4's hands when finished. The resident did not have a smoking apron on. |  |   |  |
|   | On 5/25/22 at 10:44 a.m., the resident was brought out to the smoking patio by unidentified staff. The resident was not wearing a smoking apron. The staff monitored the resident's smoking by taking the cigarette out of the resident's mouth and flicking ash as needed.  |  |   |  |
|   | On 5/25/22 at 1:45 p.m., the reside smoking apron on.  | ent was assisted with lighting a cigarette       | e. The resident did not have a              |  |
|   | C. Record review   |  |   |  |
|   | The 3/8/22 smoking evaluation documented the resident was unable to light the cigarette, he was unable to hold the cigarette, he was unable to dispose of the ash safely and he was not allowed to smoke without a smoking apron. The resident required supervised smoking and the resident was unable to safely smoke without assistance.   |  |   |  |
|   | The care plan last updated on 5/12   | 2/22 identified the resident was able to s       | smoke cigarettes with supervision.          |  |
|   | -The care plan showed the residen  | t required a smoking apron.                      |   |  |
|   | V. Staff interviews  |  |   |  |
|   | CNA #1 was interviewed on 5/25/22 at 2:00 p.m. He said that he was the CNA assigned to supervise the residents. He said that he was responsible to light the cigarettes and to ensure that the residents were safe when smoking. He said that smoking aprons were only used if they were on the resident's care plan.  |  |   |  |
|   | He said was not aware if Resident  | #12, #14 and #4 were to wear the apro            | ns when smoking.                            |  |
|   | The social service director (SSD) was interviewed on 5/25/22 at 5:53 p.m. The SSD said each resident assessed for their smoking abilities. She said that when a resident required supervision, the cigarettes kept at the nurses station. She said aprons were available and to be used when the resident was not sa while smoking. The SSD reviewed the resident care plans and confirmed the care plans needed to be individualized and include the smoking aprons.  |  |   |  |

| F 0692  | Provide enough food/fluids to main   | tain a resident's health.   |   |  |
| Level of Harm - Actual harm                         | **NOTE- TERMS IN BRACKETS H  | HAVE BEEN EDITED TO PROTECT C   | ONFIDENTIALITY** 46022                      |  |
| Residents Affected - Few                            |  | iew and interviews, the facility failed to<br>e care and services necessary to meet<br>being. |   |  |
|   | Resident #11 was admitted to the facility for long term care on 9/24/22 with diagnosis of a traumatic brain injury, aphasia (loss and ability to understand speech), gastroparesis (delayed gastric emptying), depression mild protein-calorie malnutrition, cognitive communication deficit and post-traumatic stress disorder. Following a hospital stay due to sepsis from 4/21/22 to 5/19/22, the resident was readmitted to the facility with a physician order that he was unable to consume anything by mouth (NPO) and was to receive all nutrition, fluid, and medications via a percutaneous endoscopic gastrostomy (PEG) tube (a feeding tube in the stomach).  Upon the resident's readmission to the facility on [DATE], the facility failed to obtain a readmission weight and an annual height to estimate the resident's normal body weight as part of the nutritional monitoring for the resident. The facility failed to accurately calculate Resident #11's bolus enteral feeding (means of |   |   |  |
|   | providing nutritional formula directly through g-tute) which led to the facility providing 560 calories less per day than the recommended amount based on the resident's estimated nutritional needs. Due to the facility's failure to adequately monitor the resident's nutritional status and to ensure Resident #11's nutrition and hydration needs were met, the resident sustained a significant weight loss of 19.7 pounds (lbs.) in 11 days, which was 9.8%.  |   |   |  |
|   | Additionally, the facility failed to adequately monitor Resident #2's nutritional status by ensuring weight discrepancies were clarified and nutritional interventions were put into place and re-evaluated to prevent a significant weight loss.  |   |   |  |
|   | Based on observations, during the survey process, the facility failed to ensure Resident #2 received the nutritional interventions put in place by the registered dietitian (RD), such as double portions and set up assistance with his meals.  |   |   |  |
|   | The facility failed to re-weigh the resident as requested by the RD timely (from 5/13/22 to 5/25/22 when the resident was sent to the hospital for a change of condition) to determine if the resident had sustained actual weight loss and determine if additional interventions should be put into place.  |   |   |  |
|   | Findings include:  |   |   |  |
|   | I. Facility policy and procedure   |   |   |  |
|   | The Weight policy and procedure was provided by the RD on 6/1/22 at 11:15 a.m. It revealed, in pertinent part, Residents are weighed upon admission, weekly x4 weeks, then monthly unless their treatment plans dictate differently.   |   |   |  |
|   | Weights are obtained on all residents by the 7th of the month. This facilitates the weight monitoring process by the dietician.  |   |   |  |

|   |   | PEG tube and then administered 30 menteral formula through the PEG tube υ<br>nl of water. |   |  |
|   | -However, the physician's order rea   | ad to provide 255 ml Jevity 1.5 four time   | es a day (see orders below).                |  |
|   |   | certified nurse aide (CNA) #1 weighed<br>3 lbs and was confirmed by LPN #4 an             |   |  |
|   | -While LPN #4 and CNA #1 were positioning Resident #11 to be weighed in the mechanical lift, the resider requested water four times. Resident #11 said he was very thirsty. LPN #4 did not address the resident was thirsty by communicating to the physician for additional water flush or mouth swabs for comfort.  |   |   |  |
|   | Resident #11 was observed with w mouth.   | hite build up in the cracks of his lips, or   | n his tongue and corner of his              |  |
|   | C. Record review  |   |   |  |
|   | 1. Hospital admission from 4/21/22  | to 5/19/22  |   |  |
|   | A review of the hospital medical red  | cord on 5/31/22 at 9:00 a.m. documento  | ed:   |  |
|   | Resident #11 was admitted to the hospital on 4/21/22 with severe sepsis. The resident required intubation process where a healthcare provider inserts a tube through a person's mouth or nose, then down into the airway). Resident #11 was extubated on 5/7/22, which was 17 days after he was admitted to the hospital  |   |   |  |
|   | On 5/17/22 a PEG tube was placed to begin enteral feedings as the resident was unable to swallow so The physician ordered for the resident not to consume anything by mouth (NPO). The physician atterplace a feeding tube through the resident's nose several times throughout the resident's hospital stay however the resident continued to pull the tube out. |   |   |  |
|   | The hospital RD recommended the resident receive Pivot 1.5 formula at 55 ml per hour to meet his estimated nutritional needs.   |   |   |  |
|   | On 5/19/22, the hospital RD documented that the resident weighed 202 lbs (91.8 kilograms). She estimate the resident needed 1836 to 2295 calories or 25 to 30 calories per kilogram (kg) and one ml of fluid per calorie or per physician order.  |   |   |  |

| (X4) ID PREFIX TAG   | SUMMARY STATEMENT OF DEFIC  | CIENCIES<br>full regulatory or LSC identifying informati                    | on)   |
| F 0692<br>Level of Harm - Actual harm  | Resident #11 was readmitted to the facility on [DATE] with the following nutritional recommendations: Pivot 1. 5 at 15 ml per hour for 24 hours., then increase 10 ml per hour every eight hours until the goal rate of 55 ml per hour is reached with 30 ml water flushes every four hours. Add a multivitamin with minerals once per day.   |   |   |
| Residents Affected - Few   | On 5/24/22 Resident #11 was sent to the emergency department and returned the same day as his PEG tube was leaking. The hospital was unable to replace the PEG tube as it had not had time to heal since it had been placed. The hospital physician ordered the tube to be wrapped with tape to prevent leaking until it could be replaced in a couple weeks.   |   |   |
|  | 2. Nutritional care plans   |   |   |
|  | The nutritional care plan, initiated on 5/20/22 and revised on 5/24/22, revealed the resident was at nutritional risk related to NPO status and the resident was to receive 100% of his nutrition needs via his PEG tube. It documented the resident was receiving 255 ml Jevity 1.5 from bolus feeds four times per day until the correct tubing was delivered to the facility. Upon arrival of the tubing the resident would be placed on a continuous enteral feeding via PEG tube of Jevity 1.5 at 55 ml/ hour. |   |   |
|  | The interventions included monitoring the resident's adherence to the NPO diet, monitoring of the resident's electrolytes, monitoring the resident's tolerance of current tube feed orders, providing a multivitamin via the PEG tube as ordered by the physician, and weighing the resident as ordered by the physician.   |   |   |
|  | The enteral nutrition care plan, initi meet his nutritional needs related to  | ated on 5/25/22, revealed the resident o dysphagia (swallowing difficulty). | had an enteral feeding tube to              |
|  | The interventions included providing aspiration precautions, checking the placement of the tube daily prior to providing feedings, monitoring labs as ordered by the physician, and monitoring the resident's skin around the enteral tube.   |   |   |
|  | 3. Resident #11's weights   |   |   |
|  | Resident #11's weights were documented in the resident's medical record as follows:   |   |   |
|  | -On 4/12/22, the resident weighed   | 197.8 lbs. obtained with a chair scale a                                    | t the facility.                             |
|  | -On 4/21/22, the resident weighed   | 217 lbs. The resident's weight was obta                                     | ained at the hospital.                      |
|  | -On 5/10/22, the resident weighed   | 208 lbs. The resident's weight was obta                                     | ained at the hospital.                      |
|  | -On 5/19/22, the hospital RD docur in which the weight was obtained.  | mented that the resident's weight was 2                                     | 202 lbs. It did not indicate the date       |
|  | -On 6/1/22, during the survey proce   | ess, the resident weighed 182.3 lbs obt                                     | ained with a mechanical lift.               |

| F 0692  | The 5/24/22 nutritional assessment  | t documented the resident was suscep  | tible to weight loss after being NPO  |
|   | for 11 days and a weight had still n  | ot been obtained since the resident's re  | eadmission to the facility. The   |
| Level of Harm - Actual harm                         |   | s Jevity 1.5 at 55 ml per hour for 24 houners every four hours. This provided 22  |   |
| Residents Affected - Few                            |   | ume of formula plus 180 ml of fluid from  |   |
|   | -However, Jevity 1.5 only contains 76% free water to be included towards total fluid needs per day. The resident was receiving 1003 ml free water from the formula.   |   |   |
|   | The 5/24/22 nutritional assessment continued to document the temporary order of 255 ml Jevity 1.5 bolus four times a day with 30 ml water flushes every four hours was put into place as the facility did not have the correct tubing. The estimated nutrition needs were based on the RD assessment from the hospital, which documented the resident needed 1836 to 2295 calories per day, 92 to 138 grams protein per day, and 1836 ml fluid per day (one ml per calorie per day).                          |   |   |
|   | The 5/24/22 nutritional assessment continued to document the continuous enteral feed order of Jevity 1.5 at 55 ml per hour or the 255 ml Jevity 1.5 bolus four times per day in conjunction with 30 ml proheal three times a day met 100% of the resident's estimated calorie/protein needs.  |   |   |
|   | -However, the RD note completed on 5/24/22 (see below) documented the bolus feedings only met 94% of the resident caloric needs. The bolus feedings provided 560 calories less than the continuous feedings. In addition, the resident was at risk for refeeding syndrome and was supposed to have his formula administered slowly until he met the goal rate, however he was changed to 255 ml bolus, which he was provided with all 255 ml at one time instead of slow infusion until he met his goal rate. |   |   |

| F 0760   | Ensure that residents are free from significant medication errors.  |   |   |
| Level of Harm - Actual harm  | **NOTE- TERMS IN BRACKETS H   | **NOTE- TERMS IN BRACKETS HAVE BEEN EDITED TO PROTECT CONFIDENTIALITY** 46022   |   |
| Residents Affected - Few   |   | Based on record review, observations and interviews, the facility failed to ensure one (#1) of three residents were free of significant medication errors out of 24 sample residents. |   |
|  | Specifically, the facility failed to ensure Resident #1 was not administered another resident's medications which caused a decline in his medical condition which required hospitalization. The facility further failed to ensure interventions identified as part of the performance improvement plan were put into place to prevent any additional significant medication errors.           |   |   |
|  | Resident #1 received 300 milligrams (mg) Metoprolol (a medication for blood pressure), 10 milliequivalents (meq) potassium (mineral supplement) and 12.5 mg Clozaril (a medication used for schizophrenia) that were not prescribed to him on 2/5/22. He experienced a significant change of condition, became unresponsive and was sent to the emergency room.                               |   |   |
|  | Upon discovering the significant medication error, the facility implemented a quality assurance performance improvement (QAPI) plan to prevent further medication errors within the facility. However, during the survey process, it was determined the facility failed to ensure the interventions identified in the QAPI were implemented to prevent further significant medication errors. |   |   |
|  | Findings include:   |   |   |
|  | I. Professional reference   |   |   |
|  | According to Fundamentals of Nursing, by [NAME], [NAME], Stockert, Hall & [NAME], 9th Edition (copyright 2017), page 624-627.   |   |   |
|  | A medication error can cause or lead to inappropriate medication use or patient harm. Medication errors include inaccurate prescribing, administering the wrong medication, giving the medication using the wrong route or time interval, administering extra doses, and/or failing to administer a medication.   |   |   |
|  | To prevent medication errors, follow the six rights of medication administration consistently every time you administer medications. Many medication errors can be linked in some way to an inconsistency in adhering to these six rights:  |   |   |
|  | 1. The right medication   |   |   |
|  | 2. The right dose   |   |   |
|  | 3. The right patient  |   |   |
|  | 4. The right route  |   |   |
|  | 5. The right time   |   |   |

| F 0760  | 6. The right documentation   |   |                                   |
| Level of Harm - Actual harm  Residents Affected - Few | Medication errors often occur because a patient gets a drug intended for another patient. Therefore an important step in safe medication administration is being sure that you give the right medication to the right patient. It is difficult to remember every patient's name and face. Before administering a medication, use at least two patient identifiers.   |   |                                   |
|   | II. Resident #1  |   |                                   |
|   | A. Resident status   |   |                                   |
|   | Resident #1, age 83, was admitted on [DATE]. According to the January 2022 computerized physician orders (CPO), the diagnoses included muscle weakness, hyponatremia (lower than normal level of sodium in the blood stream), cerebral edema (swelling of the brain), gastro-esophageal reflux disease (GERD), injury of the head, and presence of a cardiac defibrillator.                                  |   |                                   |
|   | The 1/24/22 nursing progress note documented the resident had mild cognitive impairment and he required staff assistance with all activities of daily living (ADLs).   |   |                                   |
|   | B. Record review   |   |                                   |
|   | The 2/5/22 nursing progress note documented at 8:25 a.m. registered nurse (RN) #1 entered the resident's room to notify him of a medication error. Upon entering the room RN #1 noticed the resident was drooling and his feet were hanging over the side of the bed. RN #1 attempted to wake the resident, but the resident was not responding to questions. RN #1 repositioned the resident in the bed.    |   |                                   |
|   | -At 8:55 a.m. RN #1 called poison control. A list of the medications the resident received were provided to poison control from the RN. Poison control recommended the resident be sent to the hospital.   |   |                                   |
|   | The 2/5/22 situation, background, appearance, review, and notification (SBAR) form documented the resident had a change of condition related to a medication error. He had an altered level of consciousness by being drowsy and difficult to arouse. The resident's functional status remained stable, however the resident had respiratory changes. The physician was notified of the change of condition. |   |                                   |
|   | The 2/5/22 hospital transfer form documented the resident's blood pressure was 96/54, a heart rate of 77, respiration rate of 17, temperature of 98.9, and oxygen saturation of 92%. It indicated the resident's representative was notified of the resident's transfer to the hospital.   |   |                                   |

| F 0803  Level of Harm - Minimal harm or potential for actual harm | At 1:04 p.m. cook #1 ran out of regular barbeque chicken and dysphagia advanced (ground) chicken. She began cooking frozen chicken on the flat top to serve to the residents. She said two pieces of chicken were stuck together and were not cooking as fast as the other pieces. She began to chop the cooking chicken into pieces with a spatula. She said the chopped chicken could be used for the dysphagia advanced diet. |   |   |
| Residents Affected - Some   |  | hand and served to residents on a dysp<br>greater than one inch (as indicated in th   |   |
