(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)		on)	
F 0610 Level of Harm - Minimal harm or potential for actual harm	Respond appropriately to all alleged violations. **NOTE- TERMS IN BRACKETS HAVE BEEN EDITED TO PROTECT CONFIDENTIALITY** 43414			
Residents Affected - Few	Based on record reviews and interviews, the facility failed to complete and maintain documentation that an alleged violation was thoroughly investigated for one out of two incidents sampled. This deficient practice has the potential to affect all residents and robs them of their right to a fair and thorough investigation of alleged abuse and neglect against them.			
	Finding includes: R159 was admitted to the facility on [DATE] and discharged to home with hospice on 08/13/21. Review of the Event Report completed by the facility on 07/30/21, the facility reported during routine ro on 07/28/21 at 08:00 AM, R159 was assessed to have multiple purple bruises on her buttocks and ana Medical Director assessed bruises and felt that they were likely trauma related as they were not over b prominences and due to the fact that the daughter had stated yesterday that resident has difficulty poo sometimes so she massages resident and pokes her. Daughter clarified poking to mean performing dig stimulation [involves moving the finger around in a circular motion inside the rectum to stimulate the boreflex]. Review of the facility's nursing progress note dated 07/28/21 .assessed resident's buttocks after CNA (certified nursing assistant) reported observed bruising when providing care. Sporadic purple/red bruis surrounding anus and dark purple bruise 0.3 cm (centimeter) by 0.5 cm on left buttocks. Family has previously reported digital stimulation. No comment by resident. Family visitation paused until further n On 03/10/22 requested from the facility the facility's investigation reports. At 09:48 AM received the Ad Protective Services (APS) Report Form for Vulnerable Adult Abuse submitted to APS intake unit, progrotes dated 07/27/21 and 07/29/21, and two documented witness statements dated on 07/28/21 from registered nurse (RN) and CNA who discovered the bruises on R159's buttocks and anal area.		ility reported during routine rounds uses on her buttocks and anal area. Ilated as they were not over bony that resident has difficulty pooping boking to mean performing digital the rectum to stimulate the bowel esident's buttocks after CNA ure. Sporadic purple/red bruising in left buttocks. Family has sitation paused until further notice. At 09:48 AM received the Adult itted to APS intake unit, progress ents dated on 07/28/21 from the

F 0684	Provide appropriate treatment and	care according to orders, resident's pre	eferences and goals.
Level of Harm - Actual harm	**NOTE- TERMS IN BRACKETS H	HAVE BEEN EDITED TO PROTECT CO	ONFIDENTIALITY** 43414
Residents Affected - Few	Based on observations, record reviews and interviews, the facility failed to provide resident centered needed care and services for three residents, R159, R20, and R47, out of a total of 17 sampled residents. The facility did not follow the physician ordered bowel regimen for R159 and R20, which resulted in a family member performing digital stimulation on R159. R159 and R20 potentially suffered discomfort and fecal impaction. R47 did not receive the appropriate care for her swollen legs and monitoring of her left kneecap for possible displacement. These deficient practices could potentially affect all residents in the facility.		
	Findings include:		
	1) R159 was admitted to the facility on [DATE] and discharged to home with hospice on 08/13/21. Residents primary language is Korean. Diagnosis include but not limited to, posterior reversible encephalopathy syndrome, unspecified encephalopathy, complete atrioventricular block, hypertensive emergency, unspecified combined systolic (congestive) and diastolic (congestive) hear failure, acute cystitis without hematuria, functional quadriplegia, dysphagia, cramp and spasm, muscle weakness, and unspecified pure hypercholesterolemia.		
	Review of the Event Report completed by the facility on 07/30/21, the facility reported during routine rounds on 07/28/21 at 08:00 AM, R159 was assessed to have multiple purple bruises on her buttocks and anal area Medical Director assessed bruises and felt that they were likely trauma related as they were not over bony prominences and due to the fact that the daughter had stated yesterday that resident has difficulty pooping sometimes so she massages resident and pokes her. Daughter clarified poking to mean performing digital stimulation [involves moving the finger around in a circular motion inside the rectum to stimulate the bowel reflex].		
	On 03/10/22 at 11:16 AM interviewed Infection Preventionist (IP), IP clarified on 07/27/21, prior to the discovered bruising, in the care plan meeting R159's daughter .shared her mom has poor output and she massages and pokes her mom . Which raised a red flag . IP did not know when and how often R159's daughter performed digital stimulation at the facility. IP shared R159 did have a history of constipation and was on bowel medication. Inquired what the protocol is for a resident who is constipated, .the nurses look at the bowel regimen. Prune juice day two, then milk mag. (milk of magnesium) day three . Concurrent review of R159's daily bowel movement output log and medication administration record (MAR), prior to the reported incident on 07/28/21, R159 did not have a bowel movement from 07/09/21 to 07/13/21, a total of five days, and from 07/15/21 to 07/21/21, a total of seven days. IP confirmed R159 was not administered the PRN (as needed) physician's ordered bowel movement regimen during those dates. Inquired if the bowel protocol should have been implemented from 07/15/21 to 07/21/21, IP stated the protocol should have been implemented, .the physician should have been called and it should have been documented. Review of R159's physician's order dated 06/21/21. The physician ordered bowel regimen included Colace 100 milligrams (mg) twice a day for constipation; senna 17.2 mg twice a day for constipation; prune juice 120 milliliters (ml) PRN if no bowel movement in two days; Milk of Magnesia (MOM) 30 milliliters PRN if no bowel movement in three days; Dulcolax suppository 10 mg PRN if no bowel movement in three days or no results from MOM; Enema Disposable PRN if no bowel movement in four days. (X4) ID PREFIX TAG SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)		on)	
F 0686	Provide appropriate pressure ulcer	care and prevent new ulcers from deve	eloping.
Level of Harm - Actual harm	**NOTE- TERMS IN BRACKETS H	IAVE BEEN EDITED TO PROTECT CO	ONFIDENTIALITY** 22063
Residents Affected - Few	Based on record review and interviews, the facility failed to prevent the development of multiple pressure ulcers (localized damage to the skin and/or underlying soft tissue usually over a bony prominence) in one resident, R48, out of a total of 17 sampled residents. The facility did not obtain the orthopedist consult which provided instruction for the removal of a boot used for R48's left ankle fracture to assess the skin on regular intervals. This deficient practice resulted in the development of avoidable multiple pressure ulcers and could potentially affect all residents.		
	Findings include:		
	R48 was admitted to the facility on [DATE]. Diagnoses includes but not limited to unspecified dementia without behavioral disturbance, Type 2 diabetes mellitus without complications, unspecified osteoarthritis (unspecified site), peripheral vascular disease, and age-related osteoporosis without current pathological fracture. Record review was done on 03/10/22 at 07:15 AM. A progress note documented on 09/27/21 at 07:26 AM, R48 complained of pain to her left foot and ankle. A physician order for an x-ray was obtained. The x-ray revealed a fracture of left distal tibia (ankle). R48 was seen by the orthopedist and returned to the facility will a left leg cast on 10/05/21. The nurse that accompanied R48 to the orthopedist reported R48 needs to weat the leg cast 24/7 (24 hours, seven days a week). R48's physician was notified on 10/05/21 at 12:02 PM and ordered aircast to left leg be worn 24/7 until further notice. Progress note dated 10/24/21 documents weekly skin check was performed. The assessor noted three pressure ulcers under R48's air cast to the left lower extremity. R48 was assessed with an unstageable pressure ulcer to the top of the left foot measuring 2 centimeter (cm) (length, L) by 2.8 cm (width, W) with eschar (dead tissue) covering the wound. A second unstageable pressure ulcer was identified to the ball of the left foot, measuring 2 cm (L) by 6 cm (W) and covered with yellow tissue, unable to determine the depth of injury. The third pressure ulcer was assessed as a Stage Two (superficial tissue injury) to the bottom of the second toe on the left foot, measuring 1.4 cm (L) x 1.5 cm (W) with beefy red wound bed. Assessor also noted purulent exudate on the foot and air cast. R48 reported pain to her foot.		
	(application of boot) through 10/16/	no documentation of assessments wer 21. The skin assessment for 10/17/21 color, no petechiae, normal skin turgor	documents no new skin issues
	Interview and concurrent record review were done with the Infection Preventionist (IP) and Director of Nursing (DON) on 03/11/22 at 09:19 AM. Staff members confirmed physician's order for weekly skin assessments with a start date of 07/28/20. Staff members confirmed skin assessments were not done 10/05/21 through 10/16/21. Inquired how would nurses assess R48's skin while wearing a boot? IP responded, the order was not to remove the boot so the nurse would assess the skin that is not covere the boot, pain, temperature changes, and areas that could contribute to a pressure ulcer. Requested to review the orthopedist consult note, the type of boot the resident was wearing, and what lead to the nu opening the resident's boot on 10/24/21.

F 0689 Level of Harm - Minimal harm or	Ensure that a nursing home area is free from accident hazards and provides adequate supervision to prever accidents.		les adequate supervision to prevent	
potential for actual harm	**NOTE- TERMS IN BRACKETS H	HAVE BEEN EDITED TO PROTECT CO	ONFIDENTIALITY** 22063	
Residents Affected - Some	Based on observations, record revi	iews and interviews, the facility failed to):	
	provide appropriate care and supsampled,	pervision for residents(R), R48, R42, at	nd R45, out of 17 residents	
	provide an environment free fror water temperatures, and	n hazards for residents in rooms [ROO	M NUMBERS] from extremely hot	
	3) provide an environment free from hazards for residents who suffer from memory loss who could potentially be poisoned due to an incomplete assessment of R16's smoking device.			
	These deficient practices could negatively impact all residents in the facility by causing them harm.			
	Findings include:			
	1) The facility submitted a report of an injury of unknown origin to the State Agency (SA) on 09/27/2. R48 was complaining of pain to the left foot and ankle and there was noted swelling of the left ankle, extending midway down dorsal aspect of foot was observed. R48's physician ordered an x-ray of left foot and ankle. An x-ray was ordered which showed a fracture of the left distal tibia.			
	The facility conducted an investigation to determine the cause of the injury. The facility reported CNA6 did not implement R48's plan of care (POC) for transferring. R48 requires a mechanical lift (devices to assist with transfers and movements of individuals who require support for mobility beyond the manual support provided by caregiver alone) with two person assist, CNA6 performed a stand-pivot transfer of the resident alone. CNA6 submitted resignation notice on 09/30/21.			
	A review of the quarterly Minimum Data Set (MDS) with an assessment reference date (ARD) of 08/30/2 notes for transfers (how resident moves between surfaces, including to or from: bed, chair, wheelchair, standing position) R48 is totally dependent (full staff performance) with two plus persons physical assist. R48's POC dated 09/09/20 identifies approach (intervention) for mechanical lift for all transfers.			
	On 03/10/22 at 10:25 AM a telephone interview was conducted with CNA6. CNA6 recalled being assigned a floater on the day of the event, they were short of staff and he was assigned to shower the residents residing in two wings, going back and forth between two nursing units. CNA6 went to shower R48 and noticed his coworkers were all busy so he transferred R48 from bed to the shower chair alone. After the shower, CNA6 stated his coworker was still busy so he transferred R48 alone from the shower chair back to bed. CNA6 reported R48 did not fall. CNA6 reported he tried to comfort the resident and massaged her foo as she said it was sore. CNA6 was asked what kind of transfer did R48 require. CNA6 responded, two mar assist and use of the lift. Further asked how he transferred R48. CNA6 responded, he stood the resident up and turned her to sit in the shower chair.

F 0725 Level of Harm - Minimal harm or potential for actual harm	On 03/10/22 at 3:30 PM, R45's EHR was reviewed. R45 is an [AGE] year-old female admitted on [DATE]. Her diagnoses include dementia, anxiety, restlessness, and agitation, generalized muscle weakness, and presence of an automatic (implantable) cardiac defibrillator (a device placed under the skin to provide electric shocks to the heart when irregular heart rates are detected).		neralized muscle weakness, and
Residents Affected - Some	R45's John Hopkins Fall Risk Asse	essment Tool dated 12/10/21 revealed	that she is a High Fall Risk.
	R45's POC revealed a problem for Impaired communication due to Cantonese as primary language and impaired hearing. Another problem listed was, Resident with agitated behaviors, taking antidepressants. intervention included, potential for bruising as resident gets restless & attempts to get out of her chair by dangling legs or sliding down from the WC [wheelchair]. Another problem was, Risk for falls due to impair mobility related to weakness in which an intervention was to Provide music, snack or toileting when [resigets restless.		naviors, taking antidepressants. An tempts to get out of her chair by was, Risk for falls due to impaired
	5) On 03/08/22 at 12:30 PM, R47 was sitting up in her wheelchair, her legs close to the ground. She was observed to be asking RN6 to go back to her room. RN6 stated that she would need assistance back to her room and there was no staff available to help her.		
	On 03/08/22 at 1:00 PM, observed R47 assisted back to bed by CNA4. R47 stated that she was tired and that her legs were swollen. CNA4 stated that she will notify the nurse regarding her swollen legs.		
	On 03/08/22 at 1:10 PM, R47 was interviewed in her room. She stated that she was a former nurse.		
	On 03/10/22 at 12:00 PM, a record review was done of R47's electronic health record (EHR). Discharge Summary from a hospital dated 12/13/21 stated that she had a left kneecap fracture that was nondisplaced or the bone was cracked in only one place that did not change the alignment of the knee, which did not require surgery. But if her knee did become displaced, then surgical intervention would be needed. R47 is [AGE] year-old female admitted to the facility on [DATE] for dementia, fracture of left humerus (left upper arm), fracture of left patella (kneecap), difficulty in walking, muscle weakness, and fall.		
		s interviewed at the unit's nursing stati vere swollen and confirmed that R47 w	•
	6) R6 is a [AGE] year-old male admitted to the facility on [DATE] for long-term care services with diagnost that include Alzheimer's dementia, chronic kidney disease, anemia, high blood pressure, diabetes, and hyperlipidemia (elevated lipids). R6 has been housed in the facility's memory care unit (MCU) since 2020 after being identified as a resident who wanders, with a high-risk of elopement, and a risk for falls.
