F 0550 Level of Harm - Minimal harm or potential for actual harm Residents Affected - Few	On 6/28/18 at 9:49 AM, LPN #1 said the first tray should be served beginning with residents in the assisted area if there were staff to assist them, followed by residents who needed to be reminded or cued to eat, and then other residents to follow. LPN #1 said she usually checked if the residents sitting together have their food delivered but she did not check yesterday. She said because there were so many staff members in the dining room other staff should have noticed Resident #16 and Resident #24 did not receive their tray. She said residents sitting together at a table should be served at the same time.

F 0656	Develop and implement a complete that can be measured.	e care plan that meets all the resident's	needs, with timetables and actions
Level of Harm - Minimal harm or potential for actual harm	**NOTE- TERMS IN BRACKETS H	HAVE BEEN EDITED TO PROTECT CO	ONFIDENTIALITY** 37888
Residents Affected - Few	Based on record review, observation, and staff interview, it was determined the facility failed to develop and implement comprehensive resident-centered care plans related to the use of psychotropic medications and resident preference to use a recliner for sleep for 2 of 12 residents (#13 and #17) whose care plans were reviewed. The residents' care plans did not address the identification of resident specific behaviors to monitor, behavioral goals, or resident-specific interventions to address behaviors exhibited, or the resident's preference to sleep in her recliner. This failure created the potential for harm if residents experienced continued anxiety, depression, or a deterioration in their physical and mental health status. Findings include:		
	Resident care plans did not iden and ordered medications.	tify or address monitoring or intervention	ons related to behavioral symptoms
	a. Resident #17 was admitted to the depression.	e facility on [DATE], with multiple diagr	noses which included major
	A Care Plan dated 6/5/17, documented Resident #17 had a diagnosis of chronic depression and received psychotropic medications to control these symptoms. The care plan did not include resident-specific behaviors the staff were to monitor or resident-specific interventions staff were to implement when she exhibited target behavioral symptoms.		
	An annual MDS assessment dated antidepressant medications daily, a	[DATE], documented Resident #17 wa	as cognitively impaired, received
	Behavior Monthly Flow Sheets, inc	luded the following:	
	- March 2018 - Resident #17 was r	monitored for agitation, anxiety, and de	pressed withdrawn.
	- April 2018 - Resident #17 was mo	onitored for fear and/or panic, agitation,	and anxiety.
	- May 2018 - Resident #17 was mo withdrawn.	monitored for exhibiting poor eye contact, wandering, and depressed	
	A Psychoactive Drug and Behavior Medication Review Form, dated 5/3/18, documented a recent increase in behaviors which included exit-seeking and wandering. The Psychoactive Drug and Behavior Medication Review Form did not reflect documentation for the changes in the Behavior Monthly Flowsheets for the months of March 2018 and April 2018.		
	The most recent mental health visit exit-seeking behavior, and stayed it	t, dated 5/24/18, documented Resident in her room and rarely left her bed.	#17 exhibited difficulty sleeping,
		tated she was not able to find documer ss behavioral symptoms on Resident #

Level of Harm - Minimal harm or potential for actual harm	**NOTE- TERMS IN BRACKETS H	IAVE BEEN EDITED TO PROTECT CO	ONFIDENTIALITY** 37888	
Residents Affected - Few	Based on record review and staff interview, it was determined the facility failed to ensure residents receiving a psychoactive medication had resident-specific target behaviors identified and monitored, and had an appropriate indication for use for these medications. This was true for 2 of 5 (#13 and #17) sampled residents who received psychoactive medications. This deficient practice created the potential for harm if residents received medications that may result in negative outcomes without clear indication of need. Findings include:			
	Resident #17 was admitted to th depression.	e facility on [DATE], with multiple diagn	oses which included major	
	A Care Plan dated 6/5/17, documented Resident #17 had a diagnosis of chronic depression and received psychotropic medications to control these symptoms. The care plan did not include resident-specific behaviors the staff were to monitor or interventions staff were to implement when she exhibited target behavioral symptoms.			
	An annual MDS assessment dated antidepressant medications daily, a	[DATE], documented Resident #17 wand had no signs of depression.	as cognitively impaired, received	
		ehavior Medication Review Form, dated which included exit-seeking and wande		
	The most recent mental health visit, dated 5/24/18, documented staff reported Resident #17 exhibited periods of difficulty sleeping, exit-seeking behavior, and stays in her room and rarely leaves her bed. The visit note documented Resident #17 had good eye contact and stated she prefers to usually stay alone in h room.			
	mouth for major depressive disorde	T June 2018, included bupropion ER (an er, mirtazapine (antidepressant) 15 mg (mood stabilizer) 125 mg, 2 capsules t	by mouth at bedtime for major	
	The facility Behavior Monthly Flowsheets provided staff 38 standardized choices of exhibited behaviors an 12 standardized choices for interventions to select. The flowsheet did not document resident-specific behavior related to anxiety and depression. Each of the target behaviors were monitored each shift during the day, evening, and night. The form directed staff to enter the number of times the behavior occurred, the intervention/drug used, and the outcome.			
	A Behavior Monthly Flowsheet, dated March 2018, directed the staff to monitor for and document the num of episodes of Resident #17 being agitated, exhibiting anxiety, being depressed and withdrawn. The Behavior Monthly Flowsheet documented 13 days that reflected Resident #17 of being depressed and withdrawn on day and evening shift in the month of April 2018.			
	A Behavior Monthly Flowsheet, dated April 2018, directed the staff to monitor for and document the number of episodes of Resident #17 being afraid, panicked, agitated, or anxious. The Behavior Monthly Flowsheet reflected 6 episodes of agitation on evening shift in the month of April 2018.

(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)				
F 0883	Develop and implement policies and procedures for flu and pneumonia vaccinations.				
Level of Harm - Minimal harm or potential for actual harm	**NOTE- TERMS IN BRACKETS HAVE BEEN EDITED TO PROTECT CONFIDENTIALITY** 39924				
Residents Affected - Many	Based on staff interview, policy review, and record review, it was determined the facility failed to initiate, update, and implement a tracking process to minimize the risk of residents acquiring, transmitting, or experiencing complications from the pneumococcal (bacterial) pneumonia. this was true for 5 of 5 residents (#1, #15, #36, #37, #91) reviewed for pneumococcal vaccines and the other 41 residents who resided in the facility. These failed practices represented a systemic failure which increased residents' risk for contracting pneumonia with its associated complications of infection of the blood and covering of the brain and spinal cord which could cause death or brain damage. Findings include: On 6/27/18 at 1:08 PM, the DON stated the facility's immunizations were not being tracked until after the facility standards state call regarding immunizations. She was observed calling a pharmacy and requesting a list of the immunizations which were sent to the facility. The DON was unable to provide a tracking system that showed who received the vaccines, which vaccine was received, when the next vaccination was due, and who refused and the reason why it was refused. A Pneumococcal Vaccination policy, updated October 2015, stated a log was maintained documenting the number of residents who received each version of the vaccine (PCV 13, PPSV 23) and those residents who refused or did not receive the vaccine. Residents who received a vaccine were to have it documented in their immunization record. The policy further stated pneumococcal vaccination occurred at the facility per the CDC guidelines.				
	The Centers for Disease Control and Prevention (CDC) website, accessed 7/11/18, included recommendations for Pneumococcal vaccination (PCV 13 and PPSV 23) for all adults [AGE] years or older. The recommendations stated adults who were [AGE] years or older, who had not previously received PCV 13, should receive a dose of PCV 13 first. A dose of PPSV 23 should occur 1 year later. The recommendations stated if a resident already received 1 or more doses of PPSV 23, the dose of PCV 13 should be given at least 1 year after they received the most recent dose of PPSV 23.				
	The facility policy was not followed. Examples include:				
	a. Resident #1 was admitted to the facility on [DATE], with diagnoses which included hypothyroidism, vitamin D deficiency, deficiency of other nutrient elements, and muscle weakness.				
	A Pneumococcal Vaccine consent, dated 6/14/18, documented verbal consent from a family member of Resident #1 for a pneumococcal vaccine to be given. There was no documentation which vaccine (PCV13 or PPSV23) was consented to.				
	Resident #1's Immunization record did not include documentation of a pneumococcal vaccination.				
	b. Resident #15 was admitted to the facility on [DATE], with diagnoses which included muscle weakness, legally blind, and polyosteoarthritis.				
	A Pneumococcal Vaccine consent, dated 6/14/18, was signed by the resident. There was no documentation which vaccine (PCV13 or PPSV23) was consented to.
