Any deficiency statement ending with an asterisk (\*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

F 0657	c. Resident requires as	sistance with toileting		
Level of Harm - Minimal harm or potential for actual harm	d. Resident requires as	ssistance with transfers		
Residents Affected - Some	Resident D's care plan lacked documentation of his bowel/bladder status, level or frequency of incontinence, and/or his use of and preference for a urinal at his bedside.			
	Further, Resident D's care plans lacked documentation that he had a vagal nerve stimulator placed as preventative equipment to treat his epilepsy and seizure disorder, which also placed him at a greater risk for falls.			
	Cross reference F684.			
	2. On 1/26/23 at 12:46 p.m., Resident 41 was initially observed. Upon attempt to interview him, he responded with very limited English words, and shook his head no, as he indicated, no English, Arabic only.			
	Using a language interpreter line, an interview was conducted with Resident 41 on 1/31/23 at 9:39 a.m. Through the interpreter Resident 41 indicated he did not like the food and often did not eat lunch or dinner because the meat was not right. Resident 41 was Muslim and did not eat pork, but it was often sent to him anyway. Resident 41 indicated he had not talked to anyone about a care plan, and that staff were often quick with him because they could not understand him.			
	During an interview on 1/31/23 at 9:57 a.m., Licensed Practical Nurses (LPN) 18 and 22 indicated they had not used the language line before, but the number was posted in his room. Neither LPN 18 or 22 were aware of what type of snacks he liked to eat at night because they did not understand him, and they did not know he preferred not to be sent pork.			
	Resident 41's comprehensive care plans were reviewed and lacked revision to include person-centered details that he did not eat pork or spoke Arabic. Although there was a care plan for Resident 41 being at risk for communication issues which advised to use the language line posted in his room, the number for the service was not included on the plan of care in case the paper fell down or was lost.

An admission nursing evaluation, which also included the 48-hour baseline care plan, was dated 10/28/23. The baseline care plan indicated Resident D had experienced a fall within the previous 30 days but did not make a note of his head injury. Interventions from the baseline care plan were as follows; Ensure resident was wearing appropriate non-skid footwear, refer to therapy, place call bell within reach, room to be well let and free of clutter, assist with ADLs (activities of daily living), bed in lowest position, remind resident to call for assistance. Further, the baseline care plan indicated bed assist bars were in place.  An admission fall risk assessment, dated 10/28/22, indicated Resident D was at risk for falls and gave instructions to proceed to the care plan. Resident D's care plans lacked documentation that he had a vagal nerve stimulator placed as preventative equipment to treat his epilepsy and seizure disorder, which also placed him at a greater risk for falls.	Upon admission to Evergreen, Resident D had diagnoses which included, but were not limited to hemiplegia and hemiparesis (muscle weakness or partial paralysis on one side of the body) following cerebral infarction	Level of Harm - Actual harm	On 1/27/23 at 8:30 a.m., Resident facility on [DATE] after an acute how A hospital discharge report, dated seizures which resulted in a fall with tissue, or body space) to his foreher confusion, but pleasant .Sat [on the stand, stating his right leg felt too widependent mobility level and poor such dependent mobility level and poor such and poor such dependent mobility level and poor such and poor such dependent mobility level and poor such and poor such dependent mobility level and poor such and such	D's medical record was reviewed. Resident D's care plan lacked documentation of his bowel/bladder status, level or frequency of incontinence, and/or his use of and preference for a urinal at his bedside.  A Nurse Practitioner (NP) progress note, dated 11/8/22 at 9:59 a.m., indicated, Resident D was being seen for an initial psychiatric consult. Resident D had increased anxiety and yelled out frequently, often for something he could reach, other times for assistance that he was unable to do alone. Resident D indicated he did not remember yelling out loudly. His medications were reviewed, and a new order was given to start Buspar (an anti-anxiety medication that can cause some people to become dizzy, lightheaded, drowsy, or less alert than they are normally).  A nursing progress note, dated 12/23/22 at 3:37 p.m., indicated, Resident D was noted to have loud outbursts every 15-30 minutes and put his call light on. Staff would enter the room, and he would not remember putting the light on. He was checked for incontinence as he wore briefs. F 0684	A Physical Therapy (PT) note, date	ed 12/31/22 at 2:26 p.m., indicated, tran	nsferred with maximum assistance
Level of Harm - Actual harm	from bed to wheelchair (wc) and wc to bed. Patient needed moderate assistance for supine to sit and moderate assistance for sit to supine getting lower extremities into bed as well. Patient needing visual cues for sequencing/safety and patient yelling out wincing due to pain throughout each transfer. Patient completed 15' (feet) on sci-fit (a specialized piece of therapy equipment similar to a seated bike and row machine) on		
Residents Affected - Few	15' (feet) on sci-fit (a specialized piece of therapy equipment similar to a seated bike and row machine) on level 2, with his left lower extremity and both upper extremities to improve strength, range of motion and endurance. Patient reported severe pain in right hip/thigh area due to fall. Per nursing nothing was reported. Patient was unable to extend right knee past 40 degrees today without pain increasing and patient resisting. Patient completed bilateral lower extremity exercises in sitting to improve strength and range of motion. Patient did what he could tolerate. Patient nurse notified of change in transfers and range of motion.		
	A ST progress note, dated 1/2/23 at 1:54 p.m., indicated Resident D had increased confusion.		
	A ST progress note, dated 1/3/23 at 4:03 p.m., indicated Resident D was seen in bed that day due to increased pain in his leg.		
	During an interview on 1/27/23 at 12:21 p.m., PT 50 indicated she had worked with Resident D on 12/31/22 and put the above progress note in. She indicated, she saw him earlier in the day, before lunch time. She went down to get him that day and remembered his bed was at a normal height, not lowered, and not left very high. Ne needed maximum assistance to transfer into his wheelchair. He went to therapy and participated but with decreased ability, they only worked his left side since his right leg hurt. She took him back to the nurses' station and reported his pain, and the nurse was unaware of any new pain.		
	A late entry nursing progress note was dated effective as of 12/31/22 at 2:50 p.m. but had been created 1/6/2023 at 3:03 p.m. The note indicated Resident D had no pain, even though ST and PT both reported pain in his right hip on 12/31/22 before lunch.		
	A late entry nursing progress note was dated effective as of 12/31/22 at 3:03 p.m. but had been created 1/2/2023 at 10:46 a.m. The note indicated Resident D had no pain, even though ST and PT both reported pain in his right hip on 12/31/22 before lunch.		
	A late entry nursing progress note was dated effective as of 12/31/22 at 4:35 p.m. but had been created 1/1/2023 at 4:55 p.m. The note was a post fall evaluation which indicated the physician had been notified of the fall on 12/31/22 at 1:30 a.m., and Resident D complained of pain in his right hip.		
	A late entry nursing progress note was dated effective as of 12/31/22 at 8:32 p.m. but had been created 1/2/2023 at 9:00 a.m. The note indicated, update to note: resident did fall. Upon further investigation, resident did admit to falling. Resident states he was in bed, reaching for his urinal and slid out of bed. When sliding out of bed resident states he hit his hip on the bed. Mild pain of 2, [as needed] given and effective. In house NP notified and ordered x-ray due to pain

Residents Affected - Few	Resident D's completed and discontinued physician orders were reviewed. An order for Resident D's right hip/pelvis was not placed until 1/3/23 at 10:45 a.m. The x-ray was ordered due to fall, pain and decreased mobility.			
	He had an order for Acetaminophen (Tylenol) 325 mg (milligrams) with instructions to give 2 tablets every 6 hours as needed for pain, which was only administered once in the month of December on the 31st at 7:34 p. m.			
	On 11/28/22, Resident D had a procedure to pace Vagal Nerve Stimulator, (VNS- an implanted medical device placed by a surgeon near the collarbone to help control seizure activity via electrical stimulation) and had been given a 6 tablet prescription for Oxycodone (a narcotic pain medication) 5 mg every 6 hours as needed for pain.			
	Although a pharmacy prescription summary was provided, no physician's ordered was placed in his record for the Oxycodone, therefore, no corresponding Medication Administration Record, (MAR) was available to verify the administration. The 6th and final tablet was signed out on 1/2/23 at 1:00 p.m., even though no pain was indicated on his MAR.			
		President of Compliance and Internal messages and internal notes related t		
	acute pain to nursing), Registered I	2/31/22 at 8:46 p.m., (approximately 9 Nurse (RN) 50 called and ordered a rec ck to verify the right hip had been requ	gularly scheduled x-ray. At 8:52 p.	
	when they would be coming to comroutine x-ray scheduled for Tuesdahis family is here. We need that caldementia .so he needs to be going an x-ray technician in the area and for an estimated time of arrival and your facility to give you guys an ET frame they are going to be the ones	1/23 at 3:24 p.m., Licensed Practical Naplete Resident D's x-ray. His appointmy 1/3/23, to which LPN 52 indicated, of led in STAT, they are going to take hin to the hospital right now Representative re-ordered the x-ray from routine to ST Representative 53 indicated, the techn A on when they are on the way to the fis to give the ETA, I do need to let you go it could be a later than usual ETA.	nent was located in the system as a non no. He's complaining of pain, not the hospital, but he has see 53 checked to see if there was FAT (immediately). LPN 52 asked hologist is going to reach out to acility, I can't guarantee a time	
		ng nursing progress note, dated effection, several attempts to call the mobile x-D.

F 0684	A phone recording on 1/1/23 at 5:1	1 p.m., was the assigned x-ray technici	ian. Tech 54 who called internally	
	to see if Resident D's x-ray could b	e rescheduled due to care trouble. Rep	presentative 55 indicated she would	
Level of Harm - Actual harm	went unanswered.	r. Representative 55 called Evergreen of	on 1/1/23 at 5:16 p.m. but the call	
Residents Affected - Few	A mobile x-ray company GPS transmitter indicated X-Ray Tech 56 arrived to Evergreen on 1/2/23 at 5:47 p. m., and left at 6:17 p.m. The X-ray order was cancelled at that time due to no physician order for the exam was on the resident's file.			
	A phone recording on 1/3/23 at 9:32 a.m., was Nurse Practitioner 56 who called to inquire about Resident D's x-ray. Representative 58 explained a technician had been out the day before but was unable to complete the x-ray because there was not a doctor's order so the exam was cancelled. NP 56 re-ordered the exam STAT and indicated, can we please order that STAT because we are going to end up taking our patient to the ER.			
	On 1/3/23 at 10:28 a.m., the x-ray was performed and the results were received at 10:41 a.m., which revealed, an acute subcapital fracture proximal right femur with angulation and superior displacement of distal fragment.			
	A nursing progress note, dated 1/2/23 at 8:49 a.m., indicated Resident D complained of mild pain, and his PRN medication was administered. However, there was no documentation on his Medication Administration Record (MAR) that the medication was administered.			
	On 1/3/23 at 11:44 a.m., .patient alert and oriented has pain but continues to refuse any pain medication . New orders were given to send Resident D to the ER where he was admitted to the hospital for evaluation and treatment, approximately 72 hours after Resident D initially complained of pain.			
	During an interview on 2/1/23 at 2:22 p.m., NP 57 indicated she had been notified of Resident D's complaints on pain on the evening of 12/31/22. By that time, he had self-reported a fall, so NP 57 ordered an x-ray. Initially he did not want to go to the hospital, and when she came in to see him on 1/3/23 a STAT x-ray was reordered because there was some mix up with the x-ray company, but throughout those day he never complained of pain.			
	During an interview on 2/2/23 at 10:15 a.m., Certified Nursing Assistant (CNA) 14 indicated she worked with Resident D on New Year's Eve and her ADL charting activity was reviewed with her. She indicated Resident D called out for help a lot and often forgot that he had. He was used to using the urinal by himself. CNA 14 indicated she had finished working with another resident and was taking some trash out when she heard Resident D call out, Help! Nurse nurse! She indicated when she entered his room, she found him on the floor and asked, oh my god, what happened? and he only said, I fell. She went to get help and it took three staff member to get him off the floor.			
	Resident D had a fall until therapy	0:39 a.m., Qualified Medication Aid, (QM) reported it to her and she went to tell hen to therapy like usual, but when they read and could not continue.	er nurse. QMA 26 indicated PT

Residents Affected - Few		isional Risk Strategist provided a copy	
	a. RN 50 who indicated, [Resident D] did not fall on my shift, he said he was in pain after therapy, I went to assess him, I called [NP 57] she ordered an x-ray, I asked him did he want to go to the hospital and he said no. [Refer above: ST progress note reported pain to nursing on 12/32/22 at 11:28 a.m., and RN 50 did not call mobile x-ray to place the x-ray request until 12/31/22 at 8:46 p.m.]		
	b. QMA 26 who indicated, He did not fall on my shift, I helped him in his chair, and he did complain of pain and we told the nurse.		
	c. NP 57 who indicated, A nurse called me and stated he was in pain, I don't remember what nurse, but I gave an order for an x-ray, I did not order STAT because his pain was mild, at that time they did not know he had called. They also called to tell me that the x-ray had not been done and I told them to send him to the ER they called and told me he refused. I came in and saw him and encouraged him to go to ER and he refused, I put in an order for a STAT x-ray.		
	d. Electronic Health Record Coordinator, (EHR) 7 who indicated, I came in Saturday 12/31/22 afternoon/evening. When I first came in, I did my rounds on the unit, I was not working the cart- I was helping on call person [nurse]. RN 50 stated patient was getting x-ray on patient due to pain states had fall. I asked her to come with me to patient's room, patient self-reported fall and instructed RN 50 to complete charting for fall- resident state he did not have pain at that time and refused to go to hospital.		
	On 2/2/23 at 2:45 p.m., The RN Divisional Risk Strategist provided copies of an in-service sign in sheet, dated 11/28/22, and in-service material. At this time, she indicated, nursing staff had been in-serviced on the provided material upon Resident D's return from a procedure where he had a vagal nerve stimulator (VNS) placed for his epilepsy and seizure activity. She highlighted a portion of the training which stated, .all nursing staff must be aware that his seizures and VNS cause him to be at a higher risk for falls. Ensure that side effect monitor is in place, call light remains in reach, frequently used items (magnet, remote, cell phone, water, urinal wheelchair) are within reach, nonskid footwear as tolerated, environment clutter free, bed is locked, reminders to call for assistance as needed

F 0690	Provide appropriate care for residents who are continent or incontinent of bowel/bladder, appropriate catheter care, and appropriate care to prevent urinary tract infections.			
Level of Harm - Minimal harm or potential for actual harm	37981			
Residents Affected - Few	Based on observation, interview, and record review, the facility failed to ensure a Foley catheter bag and tubing was not on the floor and the tubing was not above the waist for 1 of 1 resident reviewed for correct Foley catheter and tubing care (Resident 290).			
	Findings include:			
	On 1/26/23 at 10:20 a.m., Resident 290 was observed in her wheelchair as staff pushed her in the hallway. Her catheter bag was observed on the back of her wheelchair at waist height and the Foley tubing was observed above her waist.  On 1/26/23 at 4:06 p.m., Resident 290 was observed in her bed, the Foley catheter bag and tubing were not attached to the bed rail and were lying flat on the floor. The Foley bag was not in a dignity bag.  On 1/30/23 at 2:58 p.m., Resident 290 was observed in her room, in her wheelchair, the catheter bag was in a non-disposable bag at the back of her wheelchair and the tubing was observed above her waist.  On 1/31/23 at 2:05 p.m., Resident 290 was observed in her room, in her wheelchair, the catheter bag was under her wheelchair touching the floor. It was not in a dignity bag.  On 1/26/23 at 4:19 p.m., Resident 290's record was reviewed. Her diagnoses included, but were not limited to, obstructive and reflux uropathy (discomfort or trouble voiding) and chronic kidney disease (long-term kidney dysfunction).			
	Active physician catheter orders, da	ated 1/25/23, indicated:		
	a. Suprapubic (inserted above the pubic bone) catheter 14 French (size)/10 mL balloon (anchoring device). Provide privacy bag.			
	b. Measure and document the suprapubic catheter output every shift.			
	c. Catheter care every shift and as needed to wash with soap and water.			
d. Suprapubic catheter changed monthly and as needed per physician's			s order.	
	e. Clean and change T-sponge or gauze (dressing) to catheter site.			
	Her care plan, dated 1/27/23, indicated she had a suprapubic catheter related to obstructive uropathy and she would remain free of catheter related trauma through review date. The intervention included enhanced barrier precautions when dressing, bathing, showering, transferring, personal hygiene, changes linens, toileting and peri-care, providing care to urinary catheter. Position catheter bag and tubing below the level of the bladder and provide privacy bag.

(X4) ID PREFIX TAG  SUMMARY STATEMENT OF DEFICIEN (Each deficiency must be preceded by full r			on)	
F 0755  Level of Harm - Minimal harm or potential for actual harm  Residents Affected - Some	On 2/3/23 at 2:35 p.m., the Divisional Risk Strategist provide a copy of Resident N's controlled drug administration tablet record. The record indicated in writing, D/C (discontinue) home 1/26/23. Below the writing there was a signature that was illegible and a date of 1/26/23. The bottom of the record indicated to write in the date of discontinuance, amount remaining, disposition of the medication, date of disposition, and authorized signature. All areas were blank.			
	On 2/3/23 at 3:33 p.m., the Divisior upon discharge from the facility.	nal Risk Strategist indicated the hydroc	odone was sent with Resident N	
	On 2/4/23, at the survey exit, the R Medication Release Form.	legional Risk Strategist was unable to p	provide a copy of Resident N's	
	A policy titled, Discharge with Medications, was provided by the Administrator on 2/3/23 at 2:00 p.m. The policy indicated . the nurse documents the number of doses of each medication discharged to the patient or responsible party on the Medication Release Form			
	A policy titled, Controlled Substance Disposal, was provided by the Administrator on 2/2/23 at 2:00 policy indicated. Medications classified as controlled substances by the Drug Enforcement Admin (DEA) are subject to special handling, storage, disposal, and recordkeeping in the facility in accord federal and state laws and regulations			
	37981			
	4. During a review of the narcotic medication binder on the Health Hall, on 1/30/23 at 10:27 a.m., Licensed Practical Nurse (LPN) 17 indicated it was not complete. She was observed to sign out two narcotic medications without the observation of providing the narcotic medication to the resident. She indicated that morning, she provided 2 narcotics for Resident L and did not sign them out; Oxycodone 10 mg (Schedule II narcotic analgesic controlled substance: high potential of abuse) and Lyrica 75 mg (Schedule V controlled substance: low substance abuse medication).			
	On 2/2/23 at 9:09 a.m., the Administrator provided the Medication Administration Record (MAR) for Resident L. It indicated to provide oxycodone 10 mg. Orders indicated to give 1 tablet by mouth three times a day for pain, and pregabalin (Lyrica) 75 mg: give 1 capsule by mouth every morning and at bedtime for pain/restless legs (syndrome).			
	On 2/1/23 at 3:16 p.m., Resident L's record was reviewed. She was admitted on [DATE].			
	Her diagnoses included, but were not limited to, cervical spinal fusion (the joining of 2 or more neck vertebra to prevent movement), cervical disc disorder with radiculopathy (pinched nerve in the neck), and chronic pain.			
	On 1/31/23 at 2:33 p.m., the Division Risk Strategist (DRS) indicated as soon as the nurse removed a narcotic from the medication cart she should have signed it out immediately in the narcotic binder.			
	A current policy, titled, Medication Administration, with no date, was provided by the Division Risk Strategist (DRS), on 1/31/23 at 9:53 a.m. A review of the policy indicated, .Narcotics will be signed out when given . Documentation of medications will follow accepted standards of nursing practice

potential for actual harm	**NOTE- TERMS IN BRACKETS H	IAVE BEEN EDITED TO PROTECT C	ONFIDENTIALITY** 37982	
Residents Affected - Some	Based on observation, interview, and record review, the facility failed to discard expired milk from the Health Hall pantry refrigerator for 1 of 1 unit pantry refrigerator observed. This deficient practice had the potential to effect 18 of 18 residents who resided on the Health Hall.			
	Findings include:			
	On [DATE] at 10:15 a.m., during a random observation of the Health Hall pantry refrigerator, the following individual milk cartons were noted to have expired or non-legible dates:			
	a. 7 cartons of 2% milk expired on	[DATE]		
	b. 2 cartons of 2% milk had no legil	ble expiration date		
	c. 2 cartons of fat free milk expired	on [DATE]		
	d. 4 cartons of chocolate milk expir	ed on [DATE]		
	On [DATE] at 10:25 a.m., during an interview, Licensed Practical Nurse (LPN) 18 identified herself as the Wound Nurse. She indicated it was the kitchen's responsibility to check the pantry refrigerators for expired products. The kitchen staff monitored and maintained it. She was removed the expired items.  On [DATE] at 9:51 a.m., the Administrator provided a current, undated, policy titled, Storage of Resident Food. This policy indicated .The dietary staff will monitor refrigerator contents for food safety and reserve the right to dispose of expired, unsafe foods .The dietary staff will monitor refrigerator storage areas for resident's food monitoring for outdated, unsafe or otherwise food unfit for consumption

Level of Harm - Minimal harm or potential for actual harm	37981			
Residents Affected - Few	Based on observation, interview, and record review, the facility failed to ensure the glucometer (blood sugar measuring device) was cleaned according to manufacturer's instructions and facility policy for 2 of 2 residents reviewed for glucometer use (Resident 291 and 47).			
	Findings include:			
	1. On 1/31/23 at 8:21 a.m., Qualified Medication Aide (QMA) 26 donned enhanced barrier protection to enter Resident 291's room to provide medication and get a glucometer reading. She laid the contaminated glucometer on top of the medication cart without barrier protection. She wiped the glucometer was a Sani-cloth bleach wipe for 30 seconds and placed it in the top right drawer of the medication cart. She did not wipe the top of the medication cart where the contaminated glucometer had been placed. On 2/1/23 at 3:13 p.m., Resident 291's record was reviewed. Her diagnoses included, but were not limited to,			
	diabetes mellitus (blood sugar disorder), end stage renal disease (kidney disease), and morbid obesity due to excessive caloric intake.			
	a gown for enhanced barrier preca She laid the glucometer on the resi the glucometer, she placed the cor contaminated gloves but with the c Resident 56 out of their shared bat 47's trash can. She picked up the c where she washed her hands after the over the bed table or the bathro Sani-cloth bleach wipe out of the co	On 1/31/23 at 9:15 a.m., QMA 26 indicated she needed to get a blood sugar for Resident 47. She donned gown for enhanced barrier precautions. When she entered the resident's room she did not wear gloves. The laid the glucometer on the resident's over the bed table and put on gloves. After acquiring the blood for the glucometer, she placed the contaminated glucometer back on the over the bed table. She removed the contaminated gloves but with the contaminated gown still on and did not wash or gel her hands, she assisted desident 56 out of their shared bathroom to her room. QMA 26 rolled up her gown and threw it in Resident 7's trash can. She picked up the contaminated glucometer with her bare hand, took it to the bathroom where she washed her hands after laying the glucometer on the bathroom countertop. She did not disinfect the over the bed table or the bathroom countertop where the contaminated glucometer was laid. She pulled a sani-cloth bleach wipe out of the container and wiped the glucometer for 10 seconds before putting it back in the top right drawer of the medication cart.		
	On 2/1/23 at 3:12 p.m., Resident 47's record was reviewed. Her diagnosis included, but was not limited to, diabetes mellitus (blood sugar disorder).  Her physician's orders, dated 10/19/22, indicated to complete an accu-check (measuring blood sugar with a glucometer) 4 times a day.  On 1/31/23 at 9:27 a.m., the Sani-cloth bleach wipe container indicated to clean, disinfect and deodorize: treated surface must stay visibly wet for 4 minutes contact time. Use additional wipes as needed to assure a continuous 4 minute wet time. Let air dry.			
	On 1/31/23 at 9:29 a.m., QMA 26 indicated she did not know she needed to keep the glucometer wet with the bleach wipe for four minutes, then let it air dry.

(X4) ID PREFIX TAG  SUMMARY STATEMENT OF DEFICIENCIES  (Each deficiency must be preceded by full regulatory or LSC identifying information)		on)	
F 0880  Level of Harm - Minimal harm or potential for actual harm	On 1/31/23 at 9:30 a.m., Licensed Practical Nurse (LPN) 21 indicated to clean a glucometer, first lay down a clean paper towel on the medication cart to prevent contamination, then use a bleach wipe, and to keep the glucometer wet for 5 min, then let it air dry. Quickly wiping the glucometer with a bleach wipe and putting it away was a risk for infection.		
Residents Affected - Few	During an interview, on 1/31/23 at 2:23 p.m., the Division Risk Strategist (DRS) indicated the nurse used an incorrect technique to clean the glucometer and the contaminated glucometer should have had a clean barrier laid down and not set on the medication cart, the over the bed table or a resident's sink and should have been wet with bleach wipe moisture for 4 minutes.		
	A current policy, titled, Cleaning & Disinfection of Glucose Meter, dated 2/24/22, was provided by the Administrator, on 1/31/23 at 10:15 a.m. A review of the policy indicated, .a suggested method to obtain proper disinfection times for wet-contact is to wrap the machine in the wipe ensuring that all surfaced remain wet during the contact time period. Place the wrapped meter in a clean cup on the med cart for the appropriate length of time. Allow meter to air dry prior to use .Shared glucometers must undergo cleaning and disinfection after each resident use .perform hand hygiene and done PPE's (personal protective equipment) when cleaning the machine to prevent microscopic contamination. Follow the manufacturer's recommendation for cleaning and disinfecting the device use .After cleaning, disinfect the machine/device after each use. Place a clean barrier on resident bedside table, over bed table or other hard surface area when testing .Return glucometer after use for disinfection process placing on a clean barrier until disinfection/cleaning is completed. Do not place a contaminate glucometer on top of the medication cart of other surface without a clean protective barrier. Disinfect the glucometer immediately before re-use with an EPA (environmental protection agency) approved wipe  A document titled, Sani-Cloth Bleach Germicidal Disposable Wipe, dated 2019, was provided by Regional Director of Clinical Operations (RDCO), on 2/1/23 at 2:03 p.m. A review of the document indicated, .Unfold a clean wipe and thoroughly wet surface. Treated surface must remain visibly wet for a full four (4) minutes. Use additional wipes(s) if needed to assure continuous 4 minute wet contact time
