Any deficiency statement ending with an asterisk (\*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

Evergreen Crossing and the Lofts		5404 Georgetown Road Indianapolis, IN 46254		
For information on the nursing home's	plan to correct this deficiency, please con	tact the nursing home or the state survey	agency.	
(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES  (Each deficiency must be preceded by full regulatory or LSC identifying information)			
F 0684  Level of Harm - Actual harm  Residents Affected - Few	A phone recording on 1/1/23 at 5:11 p.m., was the assigned x-ray technician, Tech 54 who called internally to see if Resident D's x-ray could be rescheduled due to care trouble. Representative 55 indicated she would tell the facility it would be tomorrow. Representative 55 called Evergreen on 1/1/23 at 5:16 p.m. but the call went unanswered.			
ricolacine / modeca i r cw	A mobile x-ray company GPS transmitter indicated X-Ray Tech 56 arrived to Evergreen on 1/2/23 at 5:47 p. m., and left at 6:17 p.m. The X-ray order was cancelled at that time due to no physician order for the exam was on the resident's file.			
	A phone recording on 1/3/23 at 9:32 a.m., was Nurse Practitioner 56 who called to inquire about Resident D's x-ray. Representative 58 explained a technician had been out the day before but was unable to complete the x-ray because there was not a doctor's order so the exam was cancelled. NP 56 re-ordered the exam STAT and indicated, can we please order that STAT because we are going to end up taking our patient to the ER.			
	On 1/3/23 at 10:28 a.m., the x-ray was performed and the results were received at 10:41 a.m., which revealed, an acute subcapital fracture proximal right femur with angulation and superior displacement of distal fragment.			
	A nursing progress note, dated 1/2/23 at 8:49 a.m., indicated Resident D complained of mild pain, and his PRN medication was administered. However, there was no documentation on his Medication Administration Record (MAR) that the medication was administered.			
	On 1/3/23 at 11:44 a.m., .patient alert and oriented has pain but continues to refuse any pain medication . New orders were given to send Resident D to the ER where he was admitted to the hospital for evaluation and treatment, approximately 72 hours after Resident D initially complained of pain.			
	on pain on the evening of 12/31/22 Initially he did not want to go to the	n interview on 2/1/23 at 2:22 p.m., NP 57 indicated she had been notified of Resident D's compla on the evening of 12/31/22. By that time, he had self-reported a fall, so NP 57 ordered an x-ray. e did not want to go to the hospital, and when she came in to see him on 1/3/23 a STAT x-ray wad because there was some mix up with the x-ray company, but throughout those day he never ed of pain.		
During an interview on 2/2/23 at 10:15 a.m., Certified Nursing Assistant (CNA) 14 indicated Resident D on New Year's Eve and her ADL charting activity was reviewed with her. She in D called out for help a lot and often forgot that he had. He was used to using the urinal by h indicated she had finished working with another resident and was taking some trash out who Resident D call out, Help! Nurse nurse! She indicated when she entered his room, she foun and asked, oh my god, what happened? and he only said, I fell . She went to get help and it member to get him off the floor.				
	Resident D had a fall until therapy came down to get him and took him	ng an interview on 2/2/23 at 10:39 a.m., Qualified Medication Aid, (QMA) 26 indicated she did not kno dent D had a fall until therapy reported it to her and she went to tell her nurse. QMA 26 indicated PT e down to get him and took him to therapy like usual, but when they returned the therapist indicated dent D had complained of pain and could not continue.

Level of Harm - Minimal harm or potential for actual harm	37981		
Residents Affected - Few	Based on observation, interview, and record review, the facility failed to ensure a Foley catheter bag and tubing was not on the floor and the tubing was not above the waist for 1 of 1 resident reviewed for correct Foley catheter and tubing care (Resident 290).		
	Findings include:		
	On 1/26/23 at 10:20 a.m., Resident 290 was observed in her wheelchair as staff pushed her in the hallway. Her catheter bag was observed on the back of her wheelchair at waist height and the Foley tubing was observed above her waist.		
	On 1/26/23 at 4:06 p.m., Resident 290 was observed in her bed, the Foley catheter bag and tubing were not attached to the bed rail and were lying flat on the floor. The Foley bag was not in a dignity bag.		
	On 1/30/23 at 2:58 p.m., Resident 290 was observed in her room, in her wheelchair, the catheter bag was in a non-disposable bag at the back of her wheelchair and the tubing was observed above her waist.		
	On 1/31/23 at 2:05 p.m., Resident 290 was observed in her room, in her wheelchair, the catheter bag was under her wheelchair touching the floor. It was not in a dignity bag.		
	On 1/26/23 at 4:19 p.m., Resident 290's record was reviewed. Her diagnoses included, but were not limited to, obstructive and reflux uropathy (discomfort or trouble voiding) and chronic kidney disease (long-term kidney dysfunction).		
	Active physician catheter orders, da	ated 1/25/23, indicated:	
	a. Suprapubic (inserted above the Provide privacy bag.	pubic bone) catheter 14 French (size)/	10 mL balloon (anchoring device).
	b. Measure and document the supr	rapubic catheter output every shift.	
	c. Catheter care every shift and as	needed to wash with soap and water.	
		·	rder.
	d. Suprapubic catheter changed monthly and as needed per physician's order.		
	e. Clean and change T-sponge or gauze (dressing) to catheter site.		
	Her care plan, dated 1/27/23, indicated she had a suprapubic catheter related to obstructive uropathy and she would remain free of catheter related trauma through review date. The intervention included enhanced barrier precautions when dressing, bathing, showering, transferring, personal hygiene, changes linens, toileting and peri-care, providing care to urinary catheter. Position catheter bag and tubing below the level of the bladder and provide privacy bag.

F 0690  Level of Harm - Minimal harm or potential for actual harm  Residents Affected - Few	E's plan to correct this deficiency, please contact the nursing home or the state survey agency.  SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)  Durling an interview, on 2/2/23 at 9:12 a m., the Division Risk Strategist (DRS) indicated if a resident had suprapubic catheter it was ok for the catheter tubing to be at the waist level during transfers and the catheter should not have been on the floor unless it was in a dignity bag.  Durling an interview, on 2/2/23 at 9:14 a.m., the Regional Director of Clinical Operations (RDCO) indicated during a transfer the staff might put the bag at the resident's waist level. The Foley bag was only allowed be on the floor if there was a barrier of some kind like a dignity bag.  A current policy, titled, Catheter Care, dated 6/2/21, was provided by the RDCO, on 2/2/23 at 9:30 a.m. A review of the policy indicated, Check that collection bag is not on the floor unless in dignity bag and or appropriate barrier and is draining properly and secure allowing for no reflux of urine back to the bladder. The CDC's (Center for Disease Control and Prevention) Guideline for Prevention of Catheter-Associated Urinary Tract Infections, dated February 2017, was reviewed. It indicated, .Keep the collecting bag below level of the bladder at all times. Do not rest the bag on the floor  3.1-41(a)(2)		PRS) indicated if a resident had a all during transfers and the catheter all Operations (RDCO) indicated the Foley bag was only allowed to RDCO, on 2/2/23 at 9:30 a.m. A runless in dignity bag and or ux of urine back to the bladder vention of Catheter-Associated

Provide and implement an infection prevention and control program.  37981  Based on observation, interview, and record review, the facility failed to ensure the glucometer (blood sugar measuring device) was cleaned according to manufacturer's instructions and facility policy for 2 of 2 residents reviewed for glucometer use (Resident 291 and 47).  Findings include:  1. On 1/31/23 at 8:21 a.m., Qualified Medication Aide (QMA) 26 donned enhanced barrier protection to enter Resident 291's room to provide medication and get a glucometer reading. She laid the contaminated glucometer on top of the medication cart without barrier protection. She wiped the glucometer was a Sani-cloth bleach wipe for 30 seconds and placed it in the top right drawer of the medication cart. She did not wipe the top of the medication cart where the contaminated glucometer had been placed.  On 2/1/23 at 3:13 p.m., Resident 291's record was reviewed. Her diagnoses included, but were not limited to, diabetes mellitus (blood sugar disorder), end stage renal disease (kidney disease), and morbid obesity due to excessive caloric intake.  2. On 1/31/23 at 9:15 a.m., QMA 26 indicated she needed to get a blood sugar for Resident 47. She donned a gown for enhanced barrier precautions. When she entered the resident's room she did not wear gloves. She laid the glucometer on the resident's over the bed table and put on gloves. After acquiring the blood for the glucometer, she placed the contaminated glucometer back on the over the bed table. She removed the contaminated gloves but with the contaminated gown still on and did not wash or gel her hands, she assisted Resident 56 out of their shared bathroom to her room. QMA 26 rolled up her gown and threw it in Resident 47's trash can. She picked up the contaminated glucometer with her bare hand, took it to the bathroom where she washed her hands after laying the glucometer on the bathroom countertop. She did not disinfect

F 0880  Level of Harm - Minimal harm or potential for actual harm	On 1/31/23 at 9:30 a.m., Licensed Practical Nurse (LPN) 21 indicated to clean a glucometer, first lay down a clean paper towel on the medication cart to prevent contamination, then use a bleach wipe, and to keep the glucometer wet for 5 min, then let it air dry. Quickly wiping the glucometer with a bleach wipe and putting it away was a risk for infection.		
Residents Affected - Few	During an interview, on 1/31/23 at 2:23 p.m., the Division Risk Strategist (DRS) indicated the nurse used an incorrect technique to clean the glucometer and the contaminated glucometer should have had a clean barrier laid down and not set on the medication cart, the over the bed table or a resident's sink and should		
	have been wet with bleach wipe moisture for 4 minutes.  A current policy, titled, Cleaning & Disinfection of Glucose Meter, dated 2/24/22, was provided by the Administrator, on 1/31/23 at 10:15 a.m. A review of the policy indicated, .a suggested method to obtain proper disinfection times for wet-contact is to wrap the machine in the wipe ensuring that all surfaced remain wet during the contact time period. Place the wrapped meter in a clean cup on the med cart for the appropriate length of time. Allow meter to air dry prior to use .Shared glucometers must undergo cleaning and disinfection after each resident use .perform hand hygiene and done PPE's (personal protective equipment) when cleaning the machine to prevent microscopic contamination .Follow the manufacturer's recommendation for cleaning and disinfecting the device use. After cleaning, disinfect the machine/device after each use. Place a clean barrier on resident bedside table, over bed table or other hard surface area when testing. Return glucometer after use for disinfection process placing on a clean barrier until disinfection/cleaning is completed. Do not place a contaminate glucometer on top of the medication cart of other surface without a clean protective barrier. Disinfect the glucometer immediately before re-use with an EPA (environmental protection agency) approved wipe  A document titled, Sani-Cloth Bleach Germicidal Disposable Wipe, dated 2019, was provided by Regional Director of Clinical Operations (RDCO), on 2/1/23 at 2:03 p.m. A review of the document indicated, .Unfold a clean wipe and thoroughly wet surface. Treated surface must remain visibly wet for a full four (4) minutes. Use additional wipes(s) if needed to assure continuous 4 minute wet contact time
