F 0684	R48's weight record was reviewed accordance with physician orders u	from 8/25/21 to 9/13/21; record lacked intil 9/7/21.	physician notification in
Level of Harm - Actual harm	-On 8/25/21, weight was 303.0 lbs.		
Residents Affected - Few	-On 8/26/21, weight was 308 lbs.		
	-On 8/28/21, weight was 307.2 lbs.		
	-On 9/2/21, weight was 310.0 lbs.		
	-On 9/3/21, weight was 312.6 lbs.		
-no weight was recorded on 9/4/21 according to physician's orders			
	-On 9/5/21, weight was 315.0 lbs.	J	
	-On 9/7/21, weight was 315.0 lbs.		
	R48's physician notification dated 9 other symptoms. The note indicate	0/7/21, indicated R48 had a 13 lb. weigld R48 had +2 pitting edema to both low plaints of shortness of breath with exergally anterior and posterior.	ver extremities. The note also
	evaluation. Fluid intake was not co	wed along with nursing progress notes nsistently documented every shift; with be calculated/reviewed in accordance	the lack of documented intake on
	R48's record identified between 9 different shift when R48's fluid was not monitored or documented from 8/25/21 to 9/13/21.		
	During an observation and interview on 9/13/21, at 1:43 p.m. R48 sat up in his wheelchair. R48 stated he was in the hospital a couple of weeks ago for fluid overload and they had removed 24 liters of fluid. R48 stated when he got back from the hospital, he weighed 303 lbs. but was back up again to 315 lbs. R48 stated before he went to the hospital, he had been around 330 to 335 lbs. R48 stated he had felt so much better after all the fluid was removed, and thought it had steadily progressing over time, and indicated he would have to pay closer attention to his weight gains.		
	During an interview on 9/15/21, at 8:24 a.m. medical director stated there were clear expectations nursing notify the physician when there was a weight gain in accordance with physician order. Medical director indicated the most objective measurement for fluid volume monitoring is weight gain. Medical director stated nursing needed to be monitoring/evaluating edema for the effectiveness of the treatments and medications.

F 0684 Level of Harm - Actual harm	9/14/21 at 3:42 p.m. assessment conducted: resident is alert and oriented x3, oxygen levels 92-93% on 1 L, wheezing auscultated bilaterally, 4+ edema of R and L extremities. Weight for today 190.2 lb. Nurse manger notified of change in weight, ACE wrap applied, resident left building for scheduled appointment.		
Residents Affected - Few	On 9/14/21, at 8:19 a.m. R44 was observed lying in bed in his room, resting. His facial appearance and line was red and flushed. A one liter jug of ice water was noted to be sitting at his bedside. An oxygen concentrator was beside the bed and was running, but R44 did not have a nasal cannula in his nose. On 9/14/21, at 8:43 a.m. R44 was observed sitting on the side of his bed. His legs were bare and swollen from the knees down. R44 had difficulty speaking, but was able to communicate through short phrases, gestures, some writing and answering yes, no questions. He indicated he had noticed his legs were swoll and gestured to show they were getting bigger. He also tapped on his abdomen. He indicated his legs she be wrapped. His hands were slightly swollen and he held them up to be seen. On 9/14/21, 12:03 p.m. R44 was observed to be lying in bed with his legs bare. Registered nurse (RN)-C entered the room with two elastic compression wraps and informed R44 he should have his legs wrapped before going out for the day. RN-C started wrapping R44's right leg at the toes and performed a figure eig wrap. He asked, do you like it tight? No, just a little loose? After reaching R44's knee, there was a considerable amount of wrap still on the roll, so RN-C proceeded to wrap the leg back down to the ankle. Following the right leg, RN-C wrapped the left leg in the same manner. RN-C stated the wraps were too leg and that he should have gone to find different wraps; however, RN-C did not go find any other wrap.		
	day. RN-C called to a passing nurs nursing assistant, NA-C stated daily	ed he had not been weighed. RN-C sta ing assistant (NA-F) who said R44 had y weights were to be done every morni not yet been weighed for unknown rea	not been weighed. Another ng as soon as possible, before
During an interview on 9/14/21 at 12:17p.m. RN-C confirmed that R44 had stated the best way to assess edema was to squeeze the feet and watch he confirmed he had not done this but would do it later. RN-C noted R44's we because it was more than the day before. RN-C confirmed he had been we documented a weight of 191.6, but had not called the medical provider, stated an increase possible fluid overload.			how much indent would occur and eight should be re-checked orking the day before and had ating he had not seen the order to

F 0686	Provide appropriate pressure ulcer	care and prevent new ulcers from deve	eloping.	
Level of Harm - Actual harm	**NOTE- TERMS IN BRACKETS H	NAVE BEEN EDITED TO PROTECT CO	ONFIDENTIALITY** 34985	
Residents Affected - Few	Based on observation, interview, and document review the facility failed to comprehensively assess risk for pressure ulcers, and develop and implement interventions to prevent pressure ulcer injuries for 1 of 2 residents (R175). The facility's failures resulted in harm when R175 developed a stage 2 pressure ulcer and a deep tissue pressure ulcer. In addition, the facility failed to complete comprehensive assessments for pressure ulcers and failed to follow physician orders for 1 of 4 residents (R61) reviewed for pressure ulcers.			
	Findings include			
	R175's face sheet dated 9/16/21, ir congestive heart failure.	ncluded diagnoses of dementia with be	havioral disturbance and	
	R175's significant change minimum data set (MDS) assessment dated [DATE], indicated R175 had severe cognitive impairment. The MDS identified R175 required extensive assistance from two or more staff for bed mobility, transfers, dressing, toilet use, and personal hygiene. The MDS indicated R175 was occasionally incontinent of urine and bowel. The MDS identified R175 was at risk for pressure ulcers and did not have pressure ulcers or moisture associated skin damage at the time of the assessment. The MDS indicated pressure reducing device for chair was not used for chair however a pressure reducing device was used for bed and identified R175 did not have a turning and repositioning program.			
	R175's record lacked a comprehensive assessment for risk of skin breakdown after R175 became dependent on staff for mobility.			
	plan dated 9/1/20, directed staff to at bedtime, on night rounds, and as the potential for pressure ulcer dev bruising, skin tears, and age related	entify the level of assistance in accordance with the MDS. R175's toileting care staff to toilet R175 upon rising, after breakfast, before and [after] all other meals, and as needed. R175's skin care plan dated 10/17/2019, indicated R175 has cer development r/t [related to] immobility. [R175] has thin, fragile skin prone to be related petechiae (pinpoint, round spots that appear on the skin as a result of rentions included follow facility policies/protocols for the prevention of skin		
	R175's Skin Only Evaluation dated normal, and had a skin tag on right	9/10/21, at 11:44 p.m. indicated skin wupper abdomen.	varm and dry, normal color, turgor	
	During an observation on 9/13/21, at 7:40 p.m. R175 laid on her back in bed. R175's room smelled of urin RN-H and nursing assistant (NA)-H were at bedside encouraging R175 to roll over to allow them to chang her saturated incontinent garment. R175's mattress protectors was observed to also be urine soaked.			
	R175's behavior progress note dated 9/13/21, at 10:41 p.m. included tonight nurse and nursing assistant of R175 out of bed. Pain medication was offered at the beginning of the process, she did not understand. It was attempted to roll R175 she yelled out in pain and started hitting. The morphine was given and more communication about the process was provided. After several attempts to motivate the patient we rolled he on her side, washed and laid new pads down.

F 0686	1	at 7:00 a.m. R175 sat in her wheelchai	
Level of Harm - Actual harm	,	tated R175 had been in the wheelchair f the last time R175 had been toileted o	· ·
Residents Affected - Few		at 8:50 a.m. R175 was given her break y the nursing station with her breakfast	
	During an observation and interview on 9/14/21, at 12:04 p.m. R175 continued to sit in her wheelchair by the nursing station. Licensed practical nurse (LPN)-D stated R175 had been sitting there since he got there this morning, and stated he was not aware if NAs had checked her incontinent brief or repositioned her. LPN-D stated R175 had nodded off for an hour maybe two in her chair.		
	During an observation on 9/14/21, at 12:20 p.m. R175 remained by the nursing station. At 12:32 NA-A asket LPN-D how R175 transferred. LPN-D stated an unawareness and stated he would call therapy. NA-A was asked when R175 had last been toileted, NA-A stated the last time was between 6:00 a.m. and 7:00 a.m. when she assisted the night shift aide. At 12:49 p.m. R175 was transferred via full body mechanical lift to h bed by NA-A and NA-B. When NAs removed R175's incontinent garment, it was observed to be heavily saturated with urine. When R175 rolled onto her right side, a dark purple/blue area with a small wound that was bleeding was observed on her lower left buttock and small reddened area was observed on her right lower buttock. NA-A exited the room to get registered nurse (RN)-D. RN-D entered the room, RN-D observed the impaired skin integrity, and indicated R175 had a stage 1 pressure ulcer to the right buttock and the left buttock wound was a stage 2 and would have to do further evaluation if the wound was a deep tissue injury RN-D stated the left buttock had more redness than the right and appeared irritated. R175 was very cooperative with RN-D during the assessment and with application of new brief.		
	injury, with an open stage 2 pressure thought that R175 had a history of weeks R175 had an increased nee positioning herself. RN-D reviewed level of care R175 required and the often R175 needed to be turned an pressure over time had not been on have questioned/prompted or direct sitting in her chair next to the nursin NA's reattempt or get someone els and notify the charge nurse of contacted for further medical management.	3:38 p.m. RN-D stated the wound on he ire injury. RN-D stated she had convers a pressure ulcer to the same area. RN-d to for assistance; she used to be inded R175's care plan and verified the care a MDS assessment. RN-D confirmed the drepositioned and an assessment to completed after R175's change in conditated NAs to reposition R175 if there was not good to be described as a state of the interventions were unsuccess of the interventions needed to be document.	sed with family member who and stated within the last several ependent with bed mobility and plan was not consistent with the ecare plan did not identify how letermine tissue response to ion. RN-D stated the nurse should as a question of how long R175 was sing care then, it was expected the floor, nurse should then attempt ssary, the physician should be sful. RN-D stated the refusals with
	R175's progress note dated 9/14/21, 9:24 p.m. identified R175 had left buttock stage 2 deep tissue injury centimeters (cm) x 0.9 cm. Injury is purple/blue in color, small tear which had fresh red blood around the edges, less than 0.5 cm in diameter of fresh red blood in center of injury. The evaluation indicated dietar would be consulted, and care plan revised to include repositioning schedule and behavior plan for increaneed in cares including barrier cream and hydrating lotion for dry skin for comfort.

	On 9/15/21, at 3:25 p.m. R64's oxygen tubing with nasal cannula was observed on the floor in the same location, under a chair in R64's room.			
	During an interview on 9/15/21, at 3:42 p.m. licensed practical nurse (LPN)-F confirmed R64's oxygen tubing with nasal cannula was on the floor, under a chair in R64's room. LPN-F stated, That's not good, that should not be on the floor. LPN-F picked up the tubing, removed it from the oxygen concentrator and stated that he would replace it with a new nasal cannula and new tubing. When LPN-F was asked why the nasal cannula should not be on the floor, LPN-F stated, because of infection control. When LPN-F was asked what should have been done with the tubing when not in use, he stated the tubing should have been placed on the hook located above the oxygen concentrator, not on the floor.

F 0725	Provide enough nursing staff every charge on each shift.	day to meet the needs of every reside	nt; and have a licensed nurse in	
Level of Harm - Minimal harm or potential for actual harm	40553			
Residents Affected - Many	Based on interview and document review the facility failed to implement staff to answer call lights in a time manner to meet resident physical needs and a psychosocial sense of security which had the potential to affect any of the residents residing in the facility who use a call-light independently or with assist from visit			
	Findings include:			
		h record (EHR) Admission Record (fac g, history of falls and history of a broker		
	R19's EHR care plan included a focus problem area (not dated) that indicated she was at risk for falls and a corresponding intervention indicated staff should ensure the call-light was within reach and educate R19 to use it to call for assistance. According to R51's EHR Admission Record, R51 had paralysis of the right side, his dominant side. R51's EHR care plan included a focus problem area (not dated) that indicated he was at risk for falls related to gait and balance problems. A corresponding intervention indicated staff should encourage R51 to use his call-light to request assistance. Another focus problem area (not dated) indicated R51 had the potential for bladder incontinence and assistance to toileting should be offered upon rising, before and after meals, at bedtime and during the night.			
	According to R51's MDS, 8/11/21,	indicated R51 required extensive assis	ance of one person with toileting.	
	a few days before, and staff did no herself, but she had pain in her flar and was wet from head to toe and talked to him about the extended w	ording to an interview on 9/13/21, 12:51 p.m. R19 stated she had turned her call light on during the night or days before, and staff did not arrive for over an hour. R19 said she has generally been able to transfer elf, but she had pain in her flank, and she was not feeling well. She said she ended up voiding in her because wet from head to toe and I peed all over everything. When a staff person arrived, R19 said she do to him about the extended wait, and he apologized to her but did not say why it took so long. R19 was let to identify the staff person. She said that problems with call light wait time tended to occur during the shift.		
	According to an interview on 9/13/21, 2:48 p.m. R51 said he required assistance to get to the bathroom, but on the past weekend, a few days prior, he had turned on his call-light for assistance, but after waiting for a long time with no response, he managed to get up on his own, get into his wheelchair, go to the bathroom, use the toilet, and then go back to bed. R51 said about an hour and a half later a man came in to turn off his call-light and asked what he needed. It had been so long that R51 had fallen back to sleep. R51 told the staff person that he had already taken himself to the bathroom and no excuse was offered for the wait time. R51 indicated frustration and anger about this instance.

(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFIC (Each deficiency must be preceded by	CIENCIES full regulatory or LSC identifying informati	on)	
F 0758 Level of Harm - Minimal harm or potential for actual harm	prior to initiating or instead of continued medications are only used when the	s(GDR) and non-pharmacological internuing psychotropic medication; and PR e medication is necessary and PRN us	N orders for psychotropic se is limited.	
Residents Affected - Few	Based on interview and document review the facility failed to offer/attempt non-pharmacological interventions prior to administration of as needed (PRN) psychotropic medications for 1 of 5 (R171) reviewed for unnecessary medications			
	Findings include:			
	R171's face sheet indicated R171 was admitted to the facility on [DATE] with diagnoses that included generalized anxiety disorder, recurrent moderate major depressive disorder, and insomnia.			
	R171's physician order dated 9/8/21 indicated Ativan (antianxiety medication) 1 milligram (mg) by mouth every 8 hours as needed for intractable vomiting/withdrawal for 3 days.			
	R171's progress notes and medication administration record reviewed between 9/8/21 through 9/11/21 identified R171 was administered Ativan, the record did not identify reason for administration however indicated the medication was effective and did not include documentation of non-pharmacological interventions attempted or offered prior to administration. The record identified Ativan was administered on 9/8/21, at 9:04 p.m., 9/9/21 at 8:20 p.m., 9/10/21, at 1:47 p.m. and 9/11/21, at 7:40 p.m.			
	R171's Ativan order dated 9/8/21, was changed on 9/11/21; the order dated 9/11/21, indicated Ativan 1 mg by mouth every 12 hours as needed for anxiety and/or vomiting for 14 days. The record did not identify why withdrawal symptom was removed as justification for administration.			
	R171's psychotropic Evaluation tool dated 9/11/21, had a checked box in response to the question, Does the resident have anxiety or nervousness that impairs his/her quality of life or limits participation in activities. The Note Section included currently has rx [prescription] for Ativan. The evaluation indicated the mediation improved the residents' symptoms. The evaluation did not describe R171's anxiety or nervousness and did not identify non-pharmacological interventions.			
	R171's care plan did not identify diagnoses of anxiety with goals of care and non-pharmacological interventions.			
	R171's record on 9/12/21, identified target behaviors for use of Ativan as 1. Nervousness 2. Withdrawal/refusal of care 3 nausea/vomiting.			
	R171's progress notes and medication administration record reviewed between 9/12/21 through 9/14/21 identified R171 was administered Ativan, the record did not identify reason for administration, however indicated the medication was effective and did not include documentation of non-pharmacological interventions attempted or offered prior to administration. The record identified Ativan administered on 9/12/21 at 8:07 p.m., 9/13/21 at 9:25 p.m., and 9/14/21 at 8:33 p.m.			
	During an interview on 9/15/21, at 10:02 a.m. nursing assistant (NA)-G stated he had not noticed any behaviors and R171 did not display anxiety that he had noticed.

F 0791	Provide or obtain dental services for each resident.				
Level of Harm - Minimal harm or potential for actual harm	**NOTE- TERMS IN BRACKETS H	HAVE BEEN EDITED TO PROTECT CO	ONFIDENTIALITY** 40553		
Residents Affected - Few		t review, facility failed to ensure 2 of 2 r s to maintain oral comfort and reduce t			
	Findings include:				
	According to the electronic health record (EHR) Admission Sheet/face sheet, R24 had a diagnosis of dysphagia (difficulty swallowing) of the oropharyngeal phase (near mouth/throat).				
	A facility Long Term Care Evaluation dated 6/30/21 done to inform the MDS did not include any information about R24's oral or dental status, and no other evaluation of oral status was found in the EHR.				
	According to R24's care plan in the EHR, a focus problem area (not dated) indicated R24 was at risk for alteration in oral hygiene, and health related to being edentulous (no teeth), has upper and lower dentures. The focus problem indicated the dentures had been re-lined but did not indicate when that had occurred. The goal for this problem area was dated as having been initiated 6/01/2016. A corresponding intervention included: periodic offer is made to resident/family to set up dental appointments and PRN (as needed).				
	During an interview 9/13/21, 3:12 p.m. R24 stated she was fitted with her current dentures prior to her admission to the facility some six years ago. She said the dentures had to be re-lined twice but have not been adjusted in recent years. She stated she frequently had to take them out of her mouth in-between meals because the dentures had started to irritate her gums. She stated she had four children but was concerned that her family was unable to assist with making any appointment or assisting her to an appointment. She did not recall being offered any dental appointments.				
	According to an interview on 9/15/21, 10:37 a.m. a registered nurse (RN-D) managing the unit stated facility was able to provide R24 with dental visits but was unable to record on the last time R24 had re any dental assessment. RN-D stated such services should be offered at quarterly care conferences be unable to find record that such services had been offered to or declined by R24. According to an interview 9/15/21, 11:46 a.m. the licensed social worker (LSW) stated the facility sho dental visits as needed. LSW did not know if R24 had had any dental visit but stated this should be of quarterly care conferences. LSW was unable to find documentation indicating any such services had offered to or declined by R24. According to an interview 9/15/21, 12:14 p.m. a nursing assistant (NA-C) stated R24 puts her denture eat her meals but will take them out in between because there is a little spot that irritates her. NA-C s nurses were supposed to evaluate resident oral status and set up dental appointments if they see a page of the supposed to evaluate resident oral status and set up dental appointments if they see a page of the supposed to evaluate resident oral status and set up dental appointments if they see a page of the supposed to evaluate resident oral status and set up dental appointments if they see a page of the supposed to evaluate resident oral status and set up dental appointments if they see a page of the supposed to evaluate resident oral status and set up dental appointments if they see a page of the supposed to evaluate resident oral status and set up dental appointments if they see a page of the supposed to evaluate resident oral status and set up dental appointments if they see a page of the supposed to evaluate resident oral status and set up dental appointments if they see a page of the supposed to evaluate resident oral status and set up dental appointments if they see a page of the supposed to evaluate resident oral status and set up dental appointment and set up dental supposed to evaluate the

F 0791 Level of Harm - Minimal harm or potential for actual harm Residents Affected - Few	On 9/15/21, at 2:42 p.m. director of nursing (DON) stated she expected dental services were offered if any issues came up. She would expect the nurse completing the assessment would update the resident's provider if concerns such as possible cavities or broken teeth were noted. Offering dental services were important as cavities can cause pain, increases the resident's risk for infection including sepsis (an infection of the blood stream).

(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)		on)	
F 0883	Develop and implement policies an	d procedures for flu and pneumonia va	accinations.	
Level of Harm - Minimal harm or potential for actual harm	**NOTE- TERMS IN BRACKETS F	IAVE BEEN EDITED TO PROTECT C	ONFIDENTIALITY** 43084	
Residents Affected - Few	Based on interview and document review the facility failed to ensure 1 of 5 residents (R43) were offered or received pneumococcal vaccinations in accordance with the Center for Disease Control (CDC) recommendations.			
	Findings include:			
	R43's quarterly Minimum Data Set	(MDS) dated [DATE], R43 had severe	cognitive impairment.	
	R43's medical record failed to address R43's vaccination status for pneumococcal and if these vaccinations were offered to R43.			
	On 9/14/21, at 12:59 p.m. licensed practical nurse (LPN)-E confirmed documentation that would indicate R43 received the option for the pneumococcal vaccinations were offered at time of admission.			
		mber (FM)-A confirmed she was R43's as not given the option for R43 to receive		
	offered vaccines which included the	of nursing (DON) stated she expected e pneumococcal vaccinations. If a vacc eive education which include risk factor	ination was refused, then the	
		mococcal Immunizations, review date 2 s will be determined on admission. Vac
