F 0686	Provide appropriate pressure ulcer	care and prevent new ulcers from deve	eloping.
Level of Harm - Actual harm	**NOTE- TERMS IN BRACKETS H	HAVE BEEN EDITED TO PROTECT CO	ONFIDENTIALITY** 41526
Residents Affected - Some		ew, interview, and facility policy review, atment for pressure ulcers for four Res	
	This resulted in actual harm for Resident #18, who was admitted to the facility on [DATE]. Resident #18 was dependent on two staff assistance for bed mobility and required tracheostomy care. Resident #18 developed a posterior neck pressure wound on 12/15/21. Continued treatments were not administered as ordered and by 06/13/22, Resident #18's pressure wound had reoccurred, received inadequate treatments, and required mechanical debridement.		
	This resulted in actual harm for Resident #38, who was admitted to the facility on [DATE], was dependent on two staff assistance for bed mobility and required tracheostomy care. On 05/02/22, Resident #38 developed a posterior neck pressure ulcer, and by 06/06/22, due to improper and lack of wound treatments the pressure ulcer declined and developed cellulitis which required antibiotic treatment.		
	This resulted in actual harm for Resident #41, who was admitted to the facility on [DATE], was dependent on one staff assistance for bed mobility, and had severe cognitive impairment. Resident #41 had skin areas identified upon admission including to the right and left heel with no descriptive information. By 05/09/22, Resident #41's right and left heel pressure ulcers required debridement. From 05/26/22 to 05/30/22, Resident #41 was treated at the hospital for diagnoses including altered mental status and pressure injury of the deep tissue of the right heel and received intravenous antibiotics.		
	This resulted in actual harm for Resident #73, who was admitted to the facility on [DATE], was extensive one staff assistance for bed mobility, dependent on one staff assistance for transfers, and was assessed to be at low risk for the development of pressure ulcers. On 04/25/22, an open area was identified on the left lateral side of the foot. There were no wound treatments or assessments completed until 06/13/22 when the area was identified as a left lateral foot unstageable pressure wound (full-thickness skin and tissue loss in which the extent of the ulcer cannot be confirmed because it is obscured by slough or eschar) and required sharp debridement.		
	This affected four Residents (#18, a facility census was 97.	#38, #41 and #73) of eight residents ide	entified with pressure ulcers. The
	Findings include:		
	1. Review of the medical record for Resident #18 revealed an admitted [DATE]. Resident #18 was transferred to the hospital on 01/27/22 and returned on 02/02/22 and was transferred to the hospital again on 04/05/22 and returned on 04/06/22. Diagnoses included chronic respiratory failure, acquired deformity of head, attention to tracheostomy, essential primary hypertension, chronic obstructive pulmonary disease, and muscle weakness.

F 0880	Provide and implement an infection prevention and control program.		
Level of Harm - Minimal harm or potential for actual harm	41526		
Residents Affected - Many	Based on observation, interview, facility policy review, and the review of guidelines from the Centers for Disease Control and Prevention (CDC), the facility failed to maintain infection control practices for the spread of infectious diseases by not ensuring staff properly donned and maintained the wearing of facemasks while in resident care areas. This affected Resident #33 and had the potential to affect all 97 residents residing in the facility.		
	Findings include:		
	Observation on 06/30/22 at 10:35 A.M. of Registered Nurse (RN) #350 in Resident #33's room conducting conversation in close proximity while wearing an N95 (respirator) facemask with the top strap not properly donned and dangling inappropriately.		
	Interview on 06/30/22 at 10:38 A.M. with RN #350 upon exit from Resident #33's room confirmed the N95 facemask was not properly donned with the upper strap secured appropriately.		
	2. Observation on 07/05/22 at 7:45 A.M. of Medication Technician (Med Tech) #385 at the second-floor medication cart near Resident #46's room wearing an N95 facemask with the lower strap dangling beneath the chin. Interview at the time of the observation with Med Tech #385 verified the N95 facemask was not properly donned with the lower strap secured appropriately.		
	3. Observation on 07/05/22 at 8:26 A.M. of State tested Nursing Assistant (STNA) #413 near Resident #49's room wearing an N95 facemask with the lower strap dangling beneath the chin. Interview at the time of the observation with STNA #413 verified the N95 facemask was not properly donned with the lower strap secured appropriately.		
	4.
